Embedded C Coding Standard Michael Barr, 2018-06-12 Barr Group's Embedded C Coding Standard was developed to help firmware engineers minimize defects in embedded systems. Unlike the majority of coding standards, this standard focuses on practical rules that keep bugs out, including techniques designed to improve the maintainability and portability of embedded software. The rules in this coding standard include a set of guiding principles as well as specific naming conventions and other rules for the use of data types, functions, preprocessor macros, variables, and other C language constructs. Individual rules that have been demonstrated to reduce or eliminate certain types of defects are highlighted. The BARR C standard is distinct from yet compatible with the MISRA C Guidelines for Use of the C Language in Critical Systems. Programmers can easily combine rules from the two standards as needed. *Static Analysis* Andreas Podelski, 2018-08-28
