Engineering Plasticity Johnson Mellor:

Engineering Plasticity William Johnson, Peter Bassindale Mellor, 1978 **Engineering Plasticity** W. M. Johnson, 1975

Plasticity for Mechanical Engineers [by] W. Johnson [and] P.B. Mellor William Johnson, Peter Bassindale Mellor, 1962 Plastic Bending Tongxi Yu, Liangchi Zhang, 1996 From the point of view of mechanics this monograph systematically demonstrates the theory of plastic bending and its engineering applications most of the contents of the book are based on the authors research in the past decade The monograph not only expounds the contributions of the authors to the fundamental theory of plastic bending but also presents various applications of the theory in sheet metal forming particularly in the analysis and prediction of springback and wrinkling of strips and plates subjected to bending or stamping In addition to theoretical modelling attention has also been paid to the development of related numerical methods

comparisons with experimental results are also presented **Energy Absorption of Structures and Materials** G Lu, T X Yu, 2003-10-31 This important study focuses on the way in which structures and materials can be best designed to absorb kinetic energy in a controllable and predictable manner Understanding of energy absorption of structures and materials is important in calculating the damage to structures caused by accidental collision assessing the residual strength of structures after initial damage and in designing packaging to protect its contents in the event of impact Whilst a great deal of recent research has taken place into the energy absorption behaviour of structures and materials and significant progress has been made this knowledge is diffuse and widely scattered This book offers a synthesis of the most recent developments and forms a detailed and comprehensive view of the area It is an essential reference for all engineers concerned with materials engineering in relation to the theory of plasticity structural mechanics and impact dynamics Important new study of energy absorption of engineering structures and materials Shows how they can be designed to withstand sudden loading in a safe controllable and predictable way Illuminating case studies back up the theoretical analysis Plane-Strain Slip-Line Fields

for Metal-Deformation Processes W. Johnson, R. Sowerby, R. D. Venter, 2013-09-03 Plane Strain Slip Line Fields for Metal Deformation Processes A Source Book and Bibliography provides information pertinent to the theory and application of plain strain slip fields to metal working problems This book discusses the industrial importance of axial symmetry Organized into seven chapters this book begins with an overview of the oldest processes of metal forming including forging coining hammering drifting cutting or parting This text then examines the basic aspects of the basic theory of classical plasticity Other chapters consider the governing equations of the plane plastic flow of a rigid perfectly plastic solid This book discusses as well the methods for the solution of problems of plane plastic flow of a rigid perfectly plastic solid The final chapter deals with the application of the theory of plasticity to the quasi static plane strain deformation of an isotropic rigid perfectly plastic rate insensitive material This book is a valuable resource for mechanical engineers materials scientists teachers and research workers **Mechanics of Solids** H. Reid, 2016-07-29 **Metal Forming and Impact Mechanics** reviews significant developments concerning the mechanics of metal
forming and impact Topics covered include the kinematics of steady plane flows in elastoplastic media contact zone and
friction coefficient in hot rolling and plastic deformation of porous materials Developments in the use of superplastic alloys
the use of metal tubes as impact energy absorbers and fracturing of explosively loaded solids are also discussed This book
has 18 chapters divided equally between the broad headings of metal forming and impact mechanics The section on metal
forming mechanics includes papers that explore an upper bound approach to metal forming processes rotary forming of rings
under kinematic constraints and microcomputer programs for rolling and extruding The section on impact mechanics
examines the use of elementary approximation techniques to study plastic deformation in pulse loaded structures static and
dynamic axial crushing of circular and square tubes and shear control fragmentation of explosively loaded steel cylinders
