

Common Home HVAC Questions & Answers

- [D&L INC](#)

Air conditioning systems are used in offices, homes, schools, and most buildings that people frequent. Yearly maintenance of AC systems lead to increased AC performance and lower energy consumption. Here are some important questions and answers related to heating and cooling.

1. Need of air filter in AC unit

Air filters are a key component of an [HVAC](#) system. The filter acts as a protective layer which passes all the air handled by the HVAC system and catches natural particles like dust, mold and fungal spores, pet dander, fabric fibers, etc. Dirt is the #1 cause of breakdowns with AC and heating systems. Clogged, dirty filters block normal airflow and reduce a system's efficiency significantly. Regular servicing of the air filter will improve your comfort and the efficiency of your air conditioner.

2. How to reduce HVAC energy cost?

Energy costs fluctuate according to seasonal temperature changes. People spend far too much money on air conditioners to create a comfortable environment during seasonal temperature extremes. There are, however, some proactive steps you can take to reduce heating and cooling costs.

- Perform proper annual maintenance of your HVAC system.
- Change/clean air filters regularly
- Use ceiling fans to circulate air
- Adjust the temperature when you will be gone for more than a few hours.
- Block heat from outside of your home using curtains and windows during the summer season to make the home easier to cool.
- Upgrade to a high efficiency system

3. How can we improve the efficiency of an [HVAC](#) system?

Proper maintenance is essential for an HVAC system to run efficiently. Air filters need to be cleaned and replaced regularly. It is advised to replace your system if:

- It is 7 years old or older
- AND requires frequent repairs

If your older system is operating without issue, then upgrading is not an immediate concern.
