802.11 standards 802.11n ac and ax Introduction A wireless LAN WLAN is a data transmission system designed to provide location independent network access between computing devices by using radio waves rather than a cable infrastructure In the corporate enterprise wireless LANs are usually implemented as the final link between the existing wired network and a group of client computers giving these users wireless access to the full resources and services of the corporate network across a building or campus setting The widespread acceptance of WLANs depends on industry standardization to ensure product compatibility and reliability among the various manufacturers The 802.11 specification as a standard for wireless LANs was ratified by the Institute of Electrical and Electronics Engineers IEEE in the year 1997 This version of 802.11 provides for 1 Mbps and 2 Mbps data rates and a set of fundamental signaling methods and other services Like all IEEE 802 standards the 802.11 standards focus on the bottom two levels the ISO model the physical layer and link layer Any LAN application network operating system protocol including TCP/IP and Novell NetWare will run on an 802.11 compliant WLAN as easily as they run over Ethernet

IEEE 802.11 Handbook Bob O'Hara, Al Petrick, 2005-01-24 The first generation 802.11 wireless market once struggling to expand has spread from largely vertical applications such as healthcare point of sale and inventory management to become much more broad as a general networking technology being deployed in offices schools hotel guest rooms airport departure areas airplane cabins entertainment venues coffee shops restaurants and homes This has led to the tremendous growth of new sources of IEEE 802.11 devices IEEE 802.11 equipment is now moving into its second stage where the wireless LAN is being treated as a large wireless communication system As a system there is more to consider than simply the communication over the air between a single access point and the associated mobile devices This has led to innovative changes in the equipment that makes up a wireless LAN The IEEE 802.11 Handbook A Designer's Companion Second Edition is for the system network architects hardware engineers and software engineers at the heart of this second stage in the evolution of 802.11 wireless LANs and for those designers that will take 802.11 to the next stage

The Simulation, Modeling and Analysis of Wireless Local Area Networks Supporting the IEEE 802.11 Standard Jaikwan Joo, 1998-12-01 Research to improve the performance of the IEEE 802.11 has been ongoing since 1990 The focus of this research has investigated the use of the MAC and Physical layers for improving throughput An adaptive MAC protocol CATER Code Adapts To Enhance Reliability is based on the proposed MAC standard for wireless local area networks WLAN 802.11 IEEE 802.11 uses a fixed Pseudo Noise PN code for spreading the information signal implying a fixed process gain at the receiver When the channel degrades IEEE 802.11 offers only retransmissions at the MAC layer to contend with the corrupted medium However CATER allows communicating stations to reconfigure their transceivers to use a longer PN code

after a prescribed number of failed retransmissions The longer PN code increases the process gain of the receiver and reduces the error rate This thesis analyzes the performance of CATER as changing the factor Start the number of transmission before the channel is reconfigured and Max additional frame transmissions during reconfigure PN code length the number of station and implementing Forward Error Correction FEC CATER provides better throughput for smaller Start and larger Max at a high bit error rate 10⁻³ When CATER uses a PN code length of 63 the throughput is increased by 101 percent at high bit error rate BER However 802.11 is better than CATER at low BER 10⁻³
