The Politics of Empire Joseph Peschek, 2020-10-14 In the year after the September 11 2001 attacks the Bush administration put together the elements of a far reaching foreign policy doctrine based on unilateral action pre emptive military strikes and prevention of the emergence of any strategic rivals to U S supremacy Bush s grand strategy was formalized in a September 17 2002 presidential report called The National Security Strategy of the United States of America The report argued for pre emptive strikes against rogue states and terrorists even if faced with international opposition and for the maintenance of American military supremacy Additionally the report placed the U S off limits to international law asserting that the jurisdiction of the International Criminal Court does not extend to Americans Underlying the Bush doctrine is the notion that the U S must remain the unchallenged power in world affairs The United States possesses unprecedented and unequalled strength and influence in the world the report began Supremacy involves maintaining forces that will be strong enough to dissuade potential adversaries from pursuing a military build up in hopes of surpassing or equaling the

power of the United States Many questions are raised by the trajectory of U S policy under George W Bush What is distinctive about the Bush administration s militarism and unilateralism What are the political ideological and economic roots of the turn in U S foreign policy under George W Bush In what ways has the war on terrorism affected politics inside the United States in terms of civil liberties treatment of immigrants domestic and economic policy and political discourse more generally The Politics of Empire examines critically these and other urgent political and analytical questions This is a Special Issue of the Journal New Political Science

Energy Resources and Systems Tushar K. Ghosh, Mark A. Prelas, 2011-06-27 This second volume of Energy Resources and Systems is focused on renewable energy resources Renewable energy mainly comes from wind solar hydropower geothermal ocean bioenergy ethanol and hydrogen Each of these energy resources is important and growing For example high head hydroelectric energy is a well established energy resource and already

contributes about 20% of the world's electricity. Some countries have significant high head resources and produce the bulk of their electrical power by this method. However, the bulk of the world's high head hydroelectric resources have not been exploited, particularly by the underdeveloped countries. Low head hydroelectric is unexploited and has the potential to be a growth area. Wind energy is the fastest growing of the renewable energy resources for the electricity generation. Solar energy is a popular renewable energy resource. Geothermal energy is viable near volcanic areas. Bioenergy and ethanol have grown in recent years primarily due to changes in public policy meant to encourage its usage. Energy policies stimulated the growth of ethanol, for example, with the unintended side effect of rise in food prices. Hydrogen has been pushed as a transportation fuel. The authors want to provide a comprehensive series of texts on the interlinking of the nature of energy resources, the systems that utilize them, the environmental effects, the socioeconomic impact, the political aspects, and governing policies. Volume 1 on Fundamentals and Non Renewable Resources was published in 2009. It blends fundamental concepts with an understanding of the non renewable resources that dominate today's society. The authors are now working on Volume 3 on nuclear advanced energy resources and nuclear batteries, consisting of fusion space power systems, nuclear energy conversion, nuclear batteries, and advanced power fuel cells and energy storage. Volume 4 will cover environmental effects, remediation, and policy. Solutions to providing long term stable and economical energy is a complex problem which links social, economical, technical, and environmental issues. It is the goal of the four volume Energy Resources and Systems series to tell the whole story and provide the background required by students of energy to understand the complex nature of the problem and the importance of linking social, economical, technical, and environmental issues.

Renewable Energy Systems Dilwyn Jenkins, 2013-05-07. This book is the long awaited guide for anyone interested in renewables at home or work. It sweeps away scores of common misconceptions while clearly illustrating the best in renewable and energy efficiency technologies. A fully illustrated guide to renewable energy for the home and small business, the book provides an expert overview of precisely which sustainable energy technologies are appropriate for wide spread domestic and small business application. The sections on different renewable energy options provide detailed descriptions of each technology along with case studies, installation diagrams, and colour photographs showing precisely what is possible for the average household. The chapter on how to select the renewable technology most appropriate for ordinary homes and businesses summarizes this analysis in a neat and easy to use table and demonstrates with examples exactly how to assess your local renewable resources. Renewable technologies covered include wood energy, wind power, solar photovoltaics, solar thermal, passive solar, geothermal, and air to air heat pumps, as well as water or hydro based energy systems, plus the all important subject of energy efficiency. Whilst written to be accessible to a wide audience, the book is targeted at readers who are keen to work with renewable technologies: students, building engineers, architects, planners, householders, and home owners.
