## Gizmo Warm-up

Objects have several types of energy. **Potential energy** depends on an object's position or shape.

**Kinetic energy** is the energy of movement. The *Energy of a Pendulum Gizmo™* allows you to explore how the amounts of these types of energy change for a pendulum in motion.

1. On the DESCRIPTION pane, change the initial angle ( $\theta$ ) to 40 degrees. Click **Play** (). How does the **velocity** (speed and direction) of the pendulum change as it swings from right to left?

**It slows down at the far sides and speeds up in the center.**

2. On the image at right, mark the point where the pendulum swings fastest with an X. Then, circle the two points where the velocity is zero.

**Introduction:** An object that is a certain height ( $h$ ) above the ground has the potential to do work, and therefore has potential energy. This type of potential energy is called **gravitational potential energy** (*GPE*, or *PE* for short). The unit of energy is the joule (J).

**Question:** How are potential and kinetic energy related?

1. **Observe:** Select the BAR CHART tab. Click **Play** and observe. What do you notice about the gravitational potential energy (*PE*), kinetic energy (*KE*), and total energy (*TE*)? **As PE increases, KE decreases, and TE stays the same.**
