Introduction to Architectural Science Steven Szokolay,2012-05-16 By introducing the basics of architectural science this book is an ideal reference that provides an understanding of the physical basis of architectural design The knowledge gained from this book equips the reader with the tools for realizing the full potential of the good intentions of sustainable bioclimatic design The text gives the reader the knowledge to design in order to control indoor environmental conditions heat light and sound Into this discussion is introduced the problem that traditional energy resources are finite and their use damaging and governments and professional bodies demand increasing levels of sustainable design An outline is provided for creating the required indoor conditions with little or no use of energy other than from renewable sources Each chapter presents a quick outline of the basic and relevant physics of heat light sound and energy followed by an examination of human requirements The reader is then introduced to ways in which these elements can be controlled by the building and by its design

Nearly Zero Energy Building (NZEB) David Bienvenido Huertas,2022-06-08 Reducing the impact of climate change is one of the main challenges of today s society As such it is necessary to reduce the high energy consumption that comes with constructing and using buildings Current energy policies are promoting decarbonization of the built environment using the nearly zero energy building s concept This book presents information on nearly zero energy buildings including materials design and new approaches **Carbon-Neutral Architectural Design** Pablo M. La Roche,2011-12-15 The energy used to operate buildings is one of the most significant sources of greenhouse gas emissions To lessen the human impact on climate it is necessary to reduce these building related emissions New legislation as well as market and financial pressures are driving architects and developers to create low carbon buildings While it is possible to achieve many of these

reductions through appropriate climate responsive design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field Carbon Neutral Architectural Design describes how to reduce building related greenhouse gas emissions through appropriate design techniques This full color book presents strategies and methods to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive heating and cooling strategies Strategies for Designing Buildings with a Smaller Carbon Footprint Examining climate change and its relationship with buildings the book begins with a look at the sources of emissions and how these are produced as a result of interactions between buildings and the surrounding environment It then introduces a carbon neutral architectural design process CNDP and a roadmap that can be adjusted for different types of projects Discussing climate analysis and solar geometry the book explores how understanding the climate where a building is located helps to identify the design strategies that are best suited to that location whether warm and humid warm and dry temperate or cold It looks at psychrometrics and how to achieve thermal comfort with minimum emissions The book also explains how building fabric can be used to control energy flows by conduction radiation and convection helping to reduce overheating and overcooling and how to incorporate passive cooling and heating systems through appropriate design The book includes useful references equations and illustrations as well as a comparison of free carbon counting tools that can be used for residential building design Drawing on the author s extensive experience in teaching and practice this is a valuable resource for anyone who wants to reduce the carbon footprint of buildings Find more study resources at the American Institute of Architects Carbon Neutral Design Project web site What s next for green building See what Dr La Roche has to say in this video on the HMC Architects blog

Design Primer for Hot Climates Allan Konya,2013-10-22 Design Primer for Hot Climates offers a discussion of architecture and planning for hot climates The hot tropical and sub tropical regions contain most of the world s population and it is here that the majority of new buildings will be built For this reason this book concentrates on these regions but serves only as a broad outline of the climatic environmental and technological conditions The book begins with a discussion of climatic elements climatic zones and comfort This is followed by separate chapters on climatic design regional hazards e g condensation lightning storms earthquakes etc that must be considered during the design stage and factors such as site accessibility materials selection water and labor supply and building regulations and standards This book is meant not only for designers from temperate climatic areas but also for those who live in these regions in the hope that they will be stimulated to re examine conditions which may have become over familiar to them **Time-Saver Standards for**
