**Primary Wood Processing** J. C. F. Walker, B. G. Butterfield, J. M. Harris, T. A. G. Langrish, J. M. Uprichard, 2013-04-17

This book is primarily a general text covering the whole sweep of the forest industries. The overriding emphasis is on a clear simple interpretation of the underlying science demonstrating how such principles apply to processing operations. The book considers the broad question what is wood by looking at the biology chemistry and physics of wood structure. Wood quality is examined and explanations are offered on how and why wood quality varies and the implications for processing. Finally various industrial processes are reviewed and interpreted. All chapters have been written by specialists but the presentation targets a generalist audience.

**Primary Wood Processing** John C.F. Walker, 2006-09-13 Samuel Johnson of Boswell fame said about writing whatever is written without effort is in general read without pleasure and the unexamined word is not worth reading. However even the most thoughtfully written text is unlikely to be described as a good read. This book is not an exhaustive review. Rather it is an uneven selection of examples whose interplay across disciplines hopefully illuminates what drives the practice of forest production wood processing and consumer preferences. The choice of material is arbitrary reflecting personal biases. It is a summary of material presented to students at the NZ School of Forestry at the University of Canterbury. This book takes liberties with other peoples ideas weaving them into fresh themes that are at best a work in progress. The philosopher Francis Bacon argued that science is a debate in progress not a body of knowledge and also truth emerges more readily from error than confusion. We have taken the position that it is preferable to venture a reasoned opinion and be proved wrong than to waffle so don't swallow every sentence doubt everything. The reader's task is to unravel the conceits of generalizing and the risks of particularizing.

Primary Wood Processing John C.F. Walker, 2009-09-03 This book is primarily a general text covering the whole sweep of the forest industries. The book considers the broad question what is wood by looking at the biology chemistry and physics of wood structure. Wood Quality and its Biological Basis John Barnett, George Jeronimidis, 2009-02-18 Wood is the most versatile raw material available to man. It is burned as fuel shaped into utensils used as a structural engineering material converted into fibres for paper production and put to newer uses as a source of industrial chemicals. Its quality results largely from the chemical and physical structure of the cell walls of its component fibres which can be modified in nature as the tree responds to physical environmental stresses. Internal stresses can accumulate which are released catastrophically when the tree is felled often rendering the timber useless. The quality of timber as an engineering material also depends on the structure

of the wood and the way in which it has developed in the living tree Tree improvement for quality cannot be carried out without an understanding of the biological basis underlying wood formation and structure This volume brings together the viewpoints of both biologists and physical scientists covering the spectrum from the formation of wood to its structure and properties and relating these properties to industrial use This is a volume for researchers and professionals in plant physiology molecular biology and biochemistry

**Design of Structural Elements with Tropical Hardwoods** Abel O.
