probably be better reflected by melodies in admiration of the Federal Reserve System And yet the technical literature on the evaluation and measurement of economic inequality has grown remarkably over the last three decades Even as actual economic policies especially in North America and Europe have tended to move towards focusing on virtues other than the avoidance of economic inequality the professional literature on assessing and gauging economic inequality has taken quite a jump forward A great many different problems have been addressed and effectively sorted out and new problems continue to be posed and analyzed The Contents A Review Jacques Silber has done a great service to the subject by producing this collection of admirably helpful and illuminating papers on different aspects of the measurement of income inequality The reach of this collection is quite remarkable Along with a thorough overview from the editor himself the major areas in this complex field have been carefully examined and accessibly discussed *Journal of Econometrics*, 1995 Statistical Methods of Econometrics Edmond Malinvaud, 1980 Hardbound This now classic volume aims at a systematic presentation of the statistical methods used for the analysis of economic data The properties of the various procedures are studied within the framework of theoretical stochastic models Their relevance for inference on the economic phenomena is discussed at length This third edition has been updated in many respects Chapter 8 Regression in Various Contexts has been rewritten and now provides a full discussion of estimation in the linear models with a partially unknown covariance matrix which introduces a systematic treatment of heteroscedasticity random coefficients and composite errors A new chapter has been added on simultaneous equation models that are non linear with respect to the endogenous variables The reader will also find new sections on shrunken estimators on the choice of a model on specification and estimation for distributed lag equations

complexity an era of accelerating technology and global interconnection that holds more promise and more peril than any other time in human history The fossil fuels that have powered global wealth creation now threaten to destroy the world they helped build Automation and digitization promise prosperity for some unemployment for others Financial crises fuel growing inequality polarization and the retreat of democracy At heart all these problems are rooted in the economy yet the guidance provided by economic models has often failed Many books have been written about J Doyne Farmer and his work but this is the first in his own words It presents a manifesto for how to do economics better In this tale of science and ideas Farmer fuses his profound knowledge and expertise with stories from his life to explain how we can bring a scientific revolution to bear on the economic conundrums facing society Using big data and ever more powerful computers we are now able for the first time to apply complex systems science to economic activity building realistic models of the global economy The resulting simulations and the emergent behavior we observe form the cornerstone of the science of complexity economics allowing us to test ideas and make significantly better economic predictions to better address the hard problems facing the world
