Garrido,2003 Object Oriented Programming From Problem Solving to Java provides a thorough easy to follow reference to master object oriented programming principles Throughout the text problem solving and programming techniques are presented in modeling diagrams pseudo code and flowcharts Users then learn how to put theory into practice using actual Java code Unlike cookbook guides where users blindly follow the instructions this book encourages users to explore their problem solving creativity and then test their ideas in a real world environment By first learning the concepts involved in object oriented programming and then learning how to put them into use readers not only learn Java but they also learn how to become more efficient programmers      **Data Abstraction and Problem Solving with Java** Frank M. Carrano,Janet J. Prichard,2006 The second edition in Java of the classic Walls and Mirrors approach to programming designs solutions to problems using both data abstraction the walls and recursion the Mirrors Data Abstraction and Problem Solving with Java Walls and Mirrors 2eprovides a focus on the important concepts of data abstraction and data structures in a way that beginning programmers find accessible The first part of the book covers problem solving techniques including a review of Java fundamentals principles of programming and software engineering recursion and data abstraction and linked lists Later chapters focus on problem solving with abstract data types including stacks queues algorithm efficiency and sorting trees and graphs This edition contains enhanced material on OO implementation MARKET Readers searching for problem solving solutions through abstraction algorithmic refinement data structures and recursion      Problem Solving with Java, Update Elliot B. Koffman,Ursula Wolz,2002 Problem Solving with Java teaches the sound problem solving skills that beginning programmers must understand alongside the basics of object

oriented programming using Java The book emphasizes the use of objects and classes from the beginning by providing the basics of OOP from the start but delaying the complications of the AWT Swing and more theoretical concepts of OOP until later The authors approach is to design a worker class or support class for each problem The worker class has data fields for storing the problem inputs and it has methods that implement the algorithm needed to solve the problem There is a separate application class that instantiates a worker object passes data to this object and then displays the results returned by the worker object In this way the student is introduced to the importance of object interaction and separation of concerns from the very beginning The worker class knows how to solve the basic problem units conversion computation of area etc The application class knows how to get the data from the user and display it This approach better prepares students for the use of applets and GUIs The worker class can be used without modification by an applet that performs the functions of the application class
