Constraint Processing The Morgan Kaufmann Series In Artificial Intelligence:

Constraint Processing Rina Dechter, 2003-05-22 Constraint satisfaction is a simple but powerful tool Constraints identify the impossible and reduce the realm of possibilities to effectively focus on the possible allowing for a natural declarative formulation of what must be satisfied without expressing how The field of constraint reasoning has matured over the last three decades with contributions from a diverse community of researchers in artificial intelligence databases and programming languages operations research management science and applied mathematics Today constraint problems are used to model cognitive tasks in vision language comprehension default reasoning diagnosis scheduling temporal and spatial reasoning In Constraint Processing Rina Dechter synthesizes these contributions along with her own significant work to provide the first comprehensive examination of the theory that underlies constraint processing algorithms Throughout she focuses on fundamental tools and principles emphasizing the representation and analysis of algorithms Examines the basic practical aspects of each topic and then tackles more advanced issues including current research challenges Builds the reader's understanding with definitions examples theory algorithms and complexity analysis Synthesizes three decades of researchers work on constraint processing in AI databases and programming languages operations research management science and applied mathematics

Principles and Practice of Constraint Programming - CP 2005 Peter van Beek, 2005-10-19 The 11th International Conference on the Principles and Practice of Constraint Programming CP 2005 was held in Sitges Barcelona Spain October 1-5 2005 Information about the conference can be found on the web at <http://www.iiaa.csic.es/cp2005> Information about past conferences in the series can be found at <http://www.cs.ualberta.ca/ai/cp> The CP conference series is the premier international conference on constraint programming and is held annually The conference is concerned with all aspects of computing with constraints including algorithms applications environments languages models and systems This year we received 164 submissions All of the submitted papers received at least three reviews and the papers and their reviews were then extensively discussed during an online Program Committee meeting As a result the Program Committee chose 48.29% papers to be published in full in the proceedings and a further 22.13% papers to be published as short papers The full papers were presented at the conference in two parallel tracks and the short papers were presented as posters during a lively evening session Two papers were selected by a subcommittee of the Program Committee consisting of Chris Beck Gilles Pesant and myself to receive best paper awards The conference program also included excellent invited talks by Hector Geffner Ian Horrocks Francesca Rossi and Peter J Stuckey As a permanent record the proceedings contain four page extended abstracts of the invited talks

Modeling with Rules Using Semantic Knowledge Engineering Grzegorz J. Nalepa, 2017-10-04 This book proposes a consistent methodology for building intelligent systems It puts forward several formal models for designing and implementing rules based systems and presents illustrative case studies of their applications These include software engineering business process systems Semantic Web and context aware

systems on mobile devices Rules offer an intuitive yet powerful method for representing human knowledge and intelligent systems based on rules have many important applications However their practical development requires proper techniques and models a gap that this book effectively addresses , Principles and Practice of Constraint Programming ,2005

Artificial Intelligence in Design '96 John S. Gero,Fay Sudweeks,2012-12-06 Change is one of the most significant parameters in our society Designers are amongst the primary change agents for any society As a consequence design is an important research topic in engineering and architecture and related disciplines since design is not only a means of change but is also one of the keystones to economic competitiveness and the fundamental precursor to manufacturing The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research both computational and cognitive These forms of design research have only been carried out in the last decade or so and in the temporal sense they are still immature Notwithstanding this immaturity noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding Whilst many researchers in the field of artificial intelligence in design utilise ideas about how humans design as one source of concepts there is normally no attempt to model human designers Rather the results of the research presented in this volume demonstrate approaches to increasing our understanding of design as a process **Parallel Processing for Artificial Intelligence** Laveen N. Kanal,1994 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the parallelization of production systems logic has a purely declarative interpretation which does not demand a particular evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important

topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful formalism for describing natural languages The second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry
