Environmental Problems in an Urbanizing World Jorge E. Hardoy, Diana Mitlin, David Satterthwaite, 2013-11-05 New edition of Environmental Problems in Third World Cities Cities in Africa Asia and Latin America contain some of the world's most life and health threatening human environments Environment related diseases and injuries cause millions of preventable deaths each year In many squatter settlements children are 40 to 50 times more likely to die before the age of five than they would be in Europe or North America and most such deaths are environment related Many cities also cause serious environmental degradation to their surroundings and increasingly contribute to global warming This updated and much expanded edition of the classic Environmental Problems in Third World Cities describes environmental problems and their effect on human health local ecosystems and global cycles It points to the political causes that underpin many of these problems including ineffective unaccountable governments and aid agencies reluctance to work with the urban poor It also highlights innovative solutions such as High quality low cost homes and neighbourhoods developed by urban poor groups working with local non governmental organizations Local Agenda 21s developed by municipal governments in partnership with community organizations In their analysis the authors show that cities can meet sustainable development goals There are practical affordable solutions to their environmental problems but most of these depend on more competent and accountable city governments and on more support for low income households and their organizations The book also outlines the changes needed international aid agencies to support this PRAISE FOR THE FIRST EDITION It's rare to encounter a work as authoritative and accessible as this It is a mine of useful information from cities in every corner of the Third World which does not shy away from the immensity of the problems but says as much about the solutions to them as about the problems themselves Jonathon Porritt Well written and very accessible The Geographical Journal Of value to students teachers practitioners policy makers and aid agencies Third World Planning Review A valuable resource for understanding the underlying problems this book offers practical alternatives Cities International **The Environment for Children**

David Satterthwaite, et al, 2014-04-23 Each year millions of children die of environmental causes and many more suffer serious illness or injury Children are often the most vulnerable to the condition of their environment and their health is an index of its quality but their wellbeing is rarely given priority by governments or aid agencies Ironically the problems can be traced back to matters which can be treated straightforwardly and at relatively low cost poor drinking water or food or infectious diseases which can be controlled This book gives a multidisciplinary account of the environmental health hazards threatening children and the range of impacts they can have It also explains what can be done by communities as well as governments and aid workers to provide safe and healthy environments for children The book looks at conditions in a range of cities in the developing world as well as pollutants and other health problems affecting children in the North Published in association with UNICEF and written by some of the same authors as *Environmental Problems in Third World Cities* Earthscan 1993 this provides excellent course material and will be useful for practitioners working on child development infant and maternal health environmental health and community development David Satterthwaite is Director of the Human Settlements Programme at the International Institute for Environment and Development and principal author of *Environmental Problems in Third World Cities* 1993 and *Squatter Citizen* 1989
