Moore, 1999-10-19 This two volume work functions both as a textbook for graduates and as a reference for economic scholars Assuming only the minimal mathematics background required of every second year graduate the two volumes provide a self contained and careful development of mathematics through locally convex topological vector spaces and fixed point separation and selection theorems in such spaces Volume One covers basic set theory sequences and series continuous and semi continuous functions an introduction to general linear spaces basic convexity theory and applications to economics **Mathematical Methods in Economics** Norman Schofield, 2018-03-05 Originally published in 1984 Since the logic underlying economic theory can only be grasped fully by a thorough understanding of the mathematics this book will be invaluable to economists wishing to understand vast areas of important research It provides a basic introduction to the fundamental mathematical ideas of topology and calculus and uses these to present modern singularity theory and recent results on the generic existence of isolated price equilibria in exchange economies **Mathematical Methods in Economics Using Mathematica** Safarzadeh, 2015-10-12

Mathematical Methods in Economics and Social Choice Norman Schofield, 2004-03-15 In recent years the usual optimisation techniques have been extended to incorporate more powerful topological and differential methods and these methods have led to new results on the qualitative behaviour of general economic and political systems The progression of ideas presented in this book will familiarize the student with the geometric concepts underlying these topological methods and as a result make mathematical economics general equilibrium theory and social choice theory more accessible
