

physical disk devices may be virtualized as a set of logical units presented to a cloud user (or a server supporting a cloud user) with RAID level, cache settings, etc., to match the specific cost, reliability and performance profile required. These logical units may even be transparently moved from place to place based on global performance and availability issues (perhaps storage instance "A" needs to be taken down for preventive maintenance so its logical units would be migrated to instance "B"). The identification process would have to be cognizant of the mapping and frequent migration to assure that the correct logical units were acquired.

Since past instances of storage objects (e.g., previous versions of digital documents, deleted files, the remains of temporary objects in free space, etc.) are often included in the corpus of relevant potential evidence, it is possible that the previous instance of the logical units on "A" would be within the scope of the investigation.

4.0 Mapping ISO 27037 to the Cloud

Although ISO 27037 is a relatively new standard (issued in October 2012) and only addresses the initial stages of a digital investigation (identifying, collecting/acquiring, and preserving potential digital evidence), it represents an international public and private sector consensus of how potential digital evidence should be handled in the critical initial steps of an investigation. There are many complex challenges of digital forensics in a cloud environment and this section will map and reinterpret the ISO 27037 guidance for a cloud context.

4.1 General Requirements

4.1.1 Requirements for Identification, Collection, Acquisition and Preservation of Digital Evidence - ISO 27037

ISO 27037	CLOUD
<p>5.3.2 Auditable</p> <p>It should be possible for an independent assessor or other authorized interested parties to evaluate the activities performed by a DEFR³ and DES⁴. This requires appropriate documentation regarding actions taken, why and how.</p>	<p>While this high-level requirement itself remains the same for cloud environments, execution becomes more difficult as investigations will likely be conducted on dynamic, distributed, and complex systems that can neither be frozen nor easily</p>

³ Digital Evidence First Responder – "individual who is authorized, trained and qualified to act first at an incident scene in performing digital evidence collection and acquisition with the responsibility for handling that evidence" [14]

⁴ Digital Evidence Specialist – "individual who can carry out the tasks of a DEFR and has specialized knowledge, skills and abilities to handle a wide range of technical issues" [14]
