Abstract

The health, education, and other service applications for robots that assist through primarily social rather than physical interaction are rapidly growing, and so is the research into such technologies. Socially assistive robotics (SAR) aims to address critical areas and gaps in care by automating supervision, coaching, motivation, and companionship aspects of one-on-one interactions with individuals from various large and growing populations, including stroke survivors, the elderly and individuals with dementia, children with autism spectrum disorders, among many others. In this way, roboticists hope to improve the standard of care for large user groups. Naturally, SAR systems pose several ethical challenges regarding their design, implementation, and deployment. This paper examines the ethical challenges of socially assistive robotics from three points of view (user, caregiver, peer) using core principles from medical ethics (autonomy, beneficence, non-maleficence, justice) to determine how intended and unintended effects of a SAR can impact the delivery of care.

Social Robots: Technological, Societal and Ethical Aspects of Human-Robot Interaction Oliver Korn,2019-07-01 Social robots not only work with humans in collaborative workspaces we meet them in shopping malls and even more personal settings like health and care Does this imply they should become more human able to interpret and adequately respond to human emotions Do we want them to help elderly people Do we want them to support us when we are old ourselves Do we want them to just clean and keep things orderly or would we accept them helping us to go to the toilet or even feed us if we suffer from Parkinson s disease The answers to these questions differ from person to person They depend on cultural background personal experiences but probably most of all on the robot in question This book covers the phenomenon of social robots from the historic roots to today s best practices and future perspectives To achieve this we used a hands on interdisciplinary approach incorporating findings from computer scientists engineers designers psychologists doctors nurses historians and many more The book also covers a vast spectrum of applications from collaborative industrial work over education to sales Especially for developments with a high societal impact like robots in health and care settings the authors discuss not only technology design and usage but also ethical aspects Thus this book creates both a compendium and a guideline helping to navigate the design space for future developments in social robotics

Risk Assessment and Management in Pervasive Computing Varuna Godara,2009-01-01 This book provides extensive information about pervasive computing its implications from operational legal and ethical perspective so that current and future pervasive service providers can make responsible decisions about where when and how to use this technology Provided by publisher

Roboethics Spyros G. Tzafestas,2015-07-27 This volume explores the ethical questions that arise in the development creation and use of robots that are capable of semiautonomous or autonomous decision making and human like action It examines how ethical and moral theories can and must be applied to address the complex and critical issues of the application of these intelligent robots in society Coverage first presents fundamental concepts and provides a general overview of ethics artificial intelligence and robotics Next the book studies all principal ethical applications of robots namely medical assistive socialized and war roboethics It looks at such issues as robotic surgery children robot and elderly robot therapeutical social interactions and the use of robots especially autonomous lethal ones in warfare In addition a chapter also considers Japanese roboethics as well as key intercultural and robot legislation issues Overall readers are provided with a thorough investigation into the moral responsibility if any of autonomous robots when doing harm This volume will serve as an ideal educational source in engineering and robotics courses as well as an introductory reference for researchers in the field

renowned leader in this field **Robot Ethics** Patrick Lin, Keith Abney, George A. Bekey, 2011-12-09 Prominent experts from science and the humanities explore issues in robot ethics that range from sex to war Robots today serve in many roles from entertainer to educator to executioner As robotics technology advances ethical concerns become more pressing Should robots be programmed to follow a code of ethics if this is even possible Are there risks in forming emotional bonds with robots How might society and ethics change with robotics This volume is the first book to bring together prominent scholars and experts from both science and the humanities to explore these and other questions in this emerging field Starting with an overview of the issues and relevant ethical theories the topics flow naturally from the possibility of programming robot ethics to the ethical use of military robots in war to legal and policy questions including liability and privacy concerns The contributors then turn to human robot emotional relationships examining the ethical implications of robots as sexual partners caregivers and servants Finally they explore the possibility that robots whether biological computational hybrids or pure machines should be given rights or moral consideration Ethics is often slow to catch up with technological developments This authoritative and accessible volume fills a gap in both scholarly literature and policy discussion offering an impressive collection of expert analyses of the most crucial topics in this increasingly important field Ethics and Robotics Rafael Capurro, Michael Nagenborg, 2009 Ethics and robotics are two academic disciplines one dealing with the moral norms and values underlying implicitly or explicitly human behavior and the other aiming at the production of artificial agents mostly as physical devices with some degree of autonomy based on rules and programmes set up by their creators Robotics is also one of the research fields where the convergence of nanotechnology biotechnology information technology and cognitive science is currently taking place with large societal and legal implications beyond traditional industrial applications Robots are and will remain in the foreseeable future dependent on human ethical scrutiny as well as on the moral and legal responsibility of humans Human robot interaction raises serious ethical questions right now that are theoretically less ambitious but practically more important than the possibility of the creation of moral machines that would be more than machines with an ethical code The ethical perspective addressed in this volume is therefore the one we humans have when interacting with robots Topics include the ethical challenges of healthcare and warfare applications of robotics as well as fundamental questions concerning the moral dimension of human robot interaction including epistemological ontological and psychoanalytic issues It deals also with the intercultural dialogue between Western and Non Western as well as between European and US American ethicists P 4 of cover *A Construction Manual for Robots' Ethical Systems* Robert Trappl, 2015-11-26 This book will help researchers and engineers in the design of ethical systems for robots addressing the philosophical questions that arise and exploring modern applications such as assistive robots and self driving cars The contributing authors are among the leading academic and industrial researchers on this topic and the book will be of value to researchers graduate students and practitioners engaged with robot design artificial intelligence and ethics **Current**

Perspectives on Purposeful Activity Rita P. Fleming Cottrell,1996 Samling af artikler fra AJOT American Journal of Occupational Therapy **Ethics in Social Autonomous Robots** Fahad Alaieri,2018 Autonomous decision making machines ranging from autonomous vehicles to chatbots are already able to make decisions that have ethical consequences If these machines are eventually deployed on a large scale members of society will have to be able to trust the decisions that are made by these machines For these machines to be trustworthy their decisions must be overseen by socially accepted ethical principles moreover these principles and their role in machine decision making must be transparent and explainable it must be possible to explain why machine decisions are made and such explanations require that the mechanisms involved for making them are transparent Furthermore manufacturing companies have a corporate social responsibility to design such robots in ways that make them not only safe but also trustworthy Members of society will not trust a robot that works in mysterious ambiguous or inexplicable ways particularly if this robot is required to make decisions based on ethical principles The current literature on embedding ethics in robots is sparse This thesis aims to partially fill this gap in order to help different stakeholders including policy makers the robot industry robots designers and the general public to understand the many dimensions of machine executable ethics To this end I provide a framework for understanding the relationships among different stakeholders who legislate create deploy and use robots and their reasons for requiring transparency and explanations This framework aims to provide an account of the relationships between the transparency of the decision making process in ethical robots explanations for their behaviour and the individual and social trust that results This thesis also presents a model that decomposes the stages of ethical decision making into their elementary components with a view to

enabling stakeholders to allocate the responsibility for such choices In addition I propose a model for transparency which demonstrates the importance of and relationships between disclosure transparency and explanation which are needed for societies to accept and trust robots One of the important stakeholders of robotics is the general public and in addition to providing an analytical framework with which to conceptualize ethical decision making this thesis also performs an analysis of opinions drawn from hundreds of written comments posted on public forums concerning the behaviour of socially autonomous robots This analysis provides insights into the layperson s responses to machines that make decisions and offers support for policy recommendations that should be considered by regulators in the future This thesis contributes to the area of ethics and governance of artificial intelligence
