

INTERMEDIATE ACCOUNTING CHAPTER 14- BONDS AND LONG-TERM NOTES

- External financing usually includes some combo of equity and debt funding
- Liability requires the future payment of cash in specified (or estimated) amounts, at specified (or projected) dates.

Periodic interest = effective interest rate * amount of debt outstanding during the period

Present value of a liability = present value of its related cash flows *discounted* at effective rate of interest at issuance

- Long term liabilities are reported at their present values.
- Bonds are the most common form of corporate debt
- A bond issue divides a large liability into many smaller liabilities (this avoids having to find somebody willing to lend hundreds of thousands of dollars)
- Bonds obligate the issuing corporation to repay a stated amount (principal, face amount) at a specified maturity date (maturities usually range from 10-40 years). In return for the use of the money borrowed, the company also agrees to pay interest to bondholders.
- Bond indenture- document that describes specific promises made to bondholders
- Debenture bond- backed only by the full faith and credit of the issuing corporation
- Subordinated debenture- the holder is not entitled to receive any liquidation payments until the claims of other specified debt issues are satisfied
- Mortgage bond- backed by a lien on specified real estate owned by the issuer (considered less risky than debentures, typically has a lower interest rate)
- Callable (or redeemable)- allows the issuing company to buy back, or call, outstanding bonds from the bondholders before their scheduled maturity date
- Mandatory sinking fund redemptions 'retire' a bond issue gradually over its term to maturity
- Serial bonds- retire bonds on a piecemeal basis, retired in installments during all or part of the life of the issue
- Convertible bonds- retired as a consequence of bondholders choosing to convert them into shares of stock.
- Bonds represent a liability to the corporation that issues the bonds and an asset to an investor who buys the bonds as an investment.

Bond issuance journal entries issuer: debit cash (because cash is received in exchange for bonds), credit bonds payable (face amount).

Bond issuance journal entries investor: debit investment in bonds (face amount), credit cash (because cash is spent to buy bonds)

- The price of a bond issue at any particular time is not necessarily equal to its face amount
- Sell for more than face amount (premium), sell for less than face amount (discount)
- Sometimes a bond will be priced to yield exactly what the market rate is. To do this, they use the discount factor (percentage) that is the market rate.
