Burge,2012-01-19 Written as an introduction for undergraduate students this textbook covers the most important methods in digital image processing Formal and mathematical aspects are discussed at a fundamental level and various practical examples and exercises supplement the text The book uses the image processing environment ImageJ freely distributed by the National Institute of Health A comprehensive website supports the book and contains full source code for all examples in the book a question and answer forum slides for instructors etc Digital Image Processing in Java is the definitive textbook for computer science students studying image processing and digital processing **Introduction to Digital Image Processing** Dan Monroe,Harry Zwick,LETTERMAN ARMY INST OF RESEARCH PRESIDIO OF SAN FRANCISCO CA.,1984 Digital image processing is the manipulation of the digital representation of an image Source of the image can range from a common television video signal to complex imaging systems such as a scanning electron microscope Whatever the source of the image the basic techniques for storing and manipulating data are common to many image processing applications The actual hardware used in image processing is called a video frame grabber or frame buffer Video frame grabbers costing under 1000 are now available for many microcomputers including the IBM PC APPLE and S 100 bus systems Thus image processing is available to users where previously costs were prohibitive This document describes the image storage filtering techniques and one possible application in the biological sciences Keywords Pixels Convolution techniques Fourier filtering and Resolution Author

Remote Sensing Digital Image Analysis John A. Richards,2012-09-09 Remote Sensing Digital Image Analysis provides the non specialist with a treatment of the quantitative analysis of satellite and aircraft derived remotely sensed data Since the first edition of the book there have been significant developments in the algorithms used for the processing and analysis of remote sensing imagery nevertheless many of the fundamentals have substantially remained the same This new edition presents material that has retained value since those early days along with new techniques that can be incorporated into an

operational framework for the analysis of remote sensing data The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image processing in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background Each chapter covers a different aspect of the analysis of digital remotely sensed data without an excessively detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter
