Industrial Biochemistry Books:

Industrial Biochemistry G. P. Garg, 2010-01-01 **Recent Advances in Industrial Biochemistry** Muhammad Zaffar Hashmi, Amer Saeed, Syed Ghulam Musharraf, Wang Shuhong, 2024-05-08 Biochemistry is concerned with the chemical processes that occur within living organisms and microorganisms. There have been a number of publications focusing on biochemistry and its use for understanding biochemical and molecular mechanisms with the majority of the literature focusing on bench scale items. To date there has not been a comprehensive work focusing on the techno economic and industrial aspects of biochemistry from the microeconomic and pilot scales. This text covers current innovations and advances in plant biochemistry, animal biochemistry, microbial biochemistry and medicinal biochemistry plus potential uses of proteomics, genomics, recombinant DNA technology and protein application. **Recent Advances in Industrial Biochemistry** focuses on methods for recombinant proteins production and purification plus metabolic engineering and other source technologies from the industrial viewpoint providing comprehensive up to date information and evidence on contemporary development in the field of industrial biochemistry. The major focus of this book is the key issues, opportunities, approaches, advancements, products, innovations and technologies in current biochemistry from micro scale to production at pilot scale. Chapters highlight the many potential commercial prospects in various industries from food to pharmaceuticals to bioenergy providing a valuable and unique single resource for researchers. *Industrial Biochemistry* Rupesh Nandan, 2012

Industrial Aspects of Biochemistry and Genetics Gurdal N. Alaeddinoglu, 2013-05-02 **Industrial Biochemistry** Edwin Raymond Theis, 1926 *Technical Biochemistry* Oliver Kayser, Nils J. H. Aversch, 2025-05-14 This textbook of biochemistry has been completely revised and expanded for its second edition. Biotechnologists and bioprocess engineers will find precise information on modern issues in the fascinating and complex field of technical biochemistry where technology and biology need not be a contradiction. The authors have attempted to write a textbook for students of bioengineering from the student's perspective. Unlike well known and well established textbooks in biology, biochemistry and biotechnology, this book presents biological concepts and links them with technical and engineering problems. The aim of this textbook is to shed light on biochemical principles in natural product biosynthesis and explain their biotechnological and bioprocess engineering production pathways. Content: Application of biochemistry in medicine, pharmacy and engineering. Photosynthesis. The chemistry of light. Carbohydrate metabolism. Sugars as energy carriers. Amino acids and peptides. Proteins as biocatalysts. Carbohydrates, lipids and proteins. Building blocks for technical and pharmaceutical substances. Important biosyntheses of primary and secondary metabolism. Natural product biosynthesis. Biology and chemistry of secondary metabolites. Target Audience: Students of bioprocess engineering, biotechnology, pharmacy, chemistry. Biologists, biotechnologists, process engineers, pharmacists, chemists with a focus on biotechnology. **Biochemistry of Industrial Microorganisms** C.
