*Complete Idiot's Guide to the Anti-Inflammation Diet* Christopher P. Cannon, Elizabeth Vierck, 2006 The body's healing response to injury or infection is localized inflammation which is normal. However, when inflammation moves beyond the local, it becomes abnormal. New research shows that abnormal inflammation may be linked to a variety of diseases and conditions including heart disease, cancer, asthma, diabetes, and arthritis among others. Researchers are suggesting that diet can reverse this inflammation and the conditions and diseases caused by it. In *The Complete Idiot's Guide to the Anti Inflammation Diet*, readers will learn more about the diseases and conditions caused by inflammation, the foods that reduce inflammation, and why. The high risk foods that contribute to inflammation. How to tweak adjust your favourite of the popular diets to make it anti-inflammatory.

*Clinical Guide to Popular Diets* Caroline Apovian, Elizabeth Brouillard, Lorraine Young, 2018-01-29 It is no secret that the United States is facing an obesity epidemic with the obesity rates continuing to rise year after year. According to the Center for Disease Control, one third of Americans are now obese. It is no longer sufficient to simply point out the health risks of obesity to our patients as the reason to lose weight. Patients are seeking guidance in terms of what specific diet plan to follow and what foods should be eaten. There are thousands of diets on the market with new ones introduced daily. Not all diet plans have proven results nor will they work for every patient. More importantly, not all diets marketed to the public are safe to follow for an extended timeframe. In fact, research shows us that diet composition is not the key to long term success but compliance to a calorie deficient diet is the solution. So how does one choose which diet plan to recommend to patients? Finally, a book for clinicians is here to help answer this question. This book provides information to help patients understand several different research proven diets on the market today including the Atkins diet, the DASH Diet, Dietary Approaches to Stop Hypertension diet, the I diet, the Mediterranean diet, Paleo Diets, South Beach, Vegetarian diets, Weight Watchers, and the Zone diet. Each diet is carefully and thoroughly reviewed in this book by some of America's top obesity medicine and weight management specialists to provide health practitioners a knowledge of the diet composition, current research, evaluating the diet, typical weight loss results, the pros and cons of the diet, as well as which patients would most benefit from each diet plan. This book provides the necessary tools for clinicians to feel comfortable discussing several of the more popular and scientifically researched diets with patients. This book offers solid information to advise patients based on their specific health history on which diet will afford the greatest chance for success.

Trends in Dietary Fats Research M. V. Landow, 2006 Fats have important functions in the body Fats and oils are also called lipids Fats are the most concentrated source of food energy Per gram fats have over twice as many calories as protein or carbohydrates Fats supply nine calories per gram whereas carbohydrates sugars and starches and protein supply four calories per gram Our bodies store excess dietary fats in fat cells to meet later energy needs Excess dietary carbohydrates and protein also are converted into fat by our bodies and stored for later use In addition to supplying energy fats have several important functions Fats give foods their characteristic flavours Fats help provide a feeling of satiety or fullness Dietary fats carry the fat soluble vitamins A D E and K Fats are also a source of the essential fatty acids linoleic acid and linolenic acid Because the body cannot make these essential fatty acids they must be provided in the diet There are three types of natural fats found in foods These are monounsaturated polyunsaturated and saturated fats Most foods contain all three fats in different amounts Another type of fat is trans fats These fats are formed when vegetable oils are processed into margarine or shortening through a process called hydrogenation This new book brings together new research in this sometimes confusing but critical area of research
