Visual Basic .NET

Visual Basic .NET is a new version of the Visual Basic programming language. It is designed to be a modern, object-oriented language that is easy to learn and use. It is built on the .NET framework, which provides a rich set of classes and services for developing applications. Visual Basic .NET is a cross-platform language, meaning it can run on both Windows and Linux operating systems. It is also a managed language, which means that the code is executed in a virtual machine (the .NET CLR) that handles memory management and other low-level details. This makes it easier to write and maintain code. Visual Basic .NET is a powerful language for developing a wide range of applications, from simple desktop programs to complex web and mobile applications. It is a great choice for developers who want to create high-quality, reliable software.
