Circuit Design Stephan Weber, Candido Duarte, 2022-09-01 Circuit Design Science Art Designers need a skilled gut feeling about circuits and related analytical techniques plus creativity to solve all problems and to adhere to the specifications the written and the unwritten ones You must anticipate a large number of influences like temperature effects supply voltages changes offset voltages layout parasitics and numerous kinds of technology variations to end up with a circuit that works This is challenging for analog custom digital mixed signal or RF circuits and often researching new design methods in relevant journals conference proceedings and design tools unfortunately gives the impression that just a wild bunch of advanced techniques exist On the other hand state of the art tools nowadays indeed offer a good cockpit to steer the design flow which include clever statistical methods and optimization techniques Actually this almost presents a second breakthrough like the introduction of circuit simulators 40 years ago Users can now conveniently analyse all the problems discover quantify verify and even exploit them for example for optimization purposes Most designers are caught up on everyday problems so we fit that wild bunch into a systematic approach for variation aware design a designer s field guide and more That is where this book can help Circuit Design Anticipate Analyze Exploit Variations starts with best practise manual methods and links them tightly to up to date

automation algorithms We provide many tractable examples and explain key techniques you have to know We then enable you to select and setup suitable methods for each design task knowing their prerequisites advantages and as too often overlooked their limitations as well The good thing with computers is that you yourself can often verify amazing things with little effort and you can use software not only to your direct advantage in solving a specific problem but also for becoming a better skilled more experienced engineer Unfortunately EDA design environments are not good at all to learn about advanced numerics So with this book we also provide two apps for learning about statistic and optimization directly with circuit related examples and in real time so without the long simulation times This helps to develop a healthy statistical gut feeling for circuit design The book is written for engineers students in engineering and CAD methodology experts Readers should have some background in standard design techniques like entering a design in a schematic capture and simulating it and also know about major technology aspects

Critical Debates on Quantitative Psychology and Measurement: Revived and Novel Perspectives on Fundamental Problems Jana Uher, Jan Ketil Arnulf, Barbara Hanfstingl, 2025-11-14 Psychology's continued crises in replicability validity generalisability and thus confidence in its findings are currently attributed primarily to questionable research practices QRPs e.g. p hacking HARKing cherry picking Popular pertinent debates therefore centre on proposals for remedying inappropriate method applications e.g. larger samples robust statistics pre registration replication Replicable non random effects of psychological interventions and differentiations between individuals are essential for applied purposes But current approaches to replicability validity and psychometric modelling are merely pragmatic providing evidence of just utility to discriminate well and consistently between cases and in ways considered important e.g. social relevance relations to future outcomes Yet without understanding the study phenomena in themselves e.g. individuals experience beliefs thought processes and without elaborating how relevant features of them can be made amenable to quantitative investigation and if at all the quantity objection the actual causes of replicable quantitative findings cannot be explored These causes however may be completely unrelated to the actual study phenomena e.g. methodomorphism This concerns in particular the attributes and latent constructs studied in psychology given that these are theoretical and statistical concepts that are attributed and construed as means of investigation and that only refer to but do not constitute the actual study phenomena in themselves We believe the currently debated deficiencies of quantitative practices in psychology are just surface symptoms whereas fundamental problems e.g. the inappropriateness of statistical assumptions for psychical phenomena and the actual root

causes underlying psychology's crises and disputes around its scientific status are still hardly addressed. With this Research Topic we want to give new impetus to critical debates on the epistemological and methodological foundations of quantitative methods and measurement in psychology including problems long known but still hardly considered. Examples are: The behavioural and psychological phenomena's non-ergodicity rendering sample level statistics uninformative about individual level phenomena; Psychometricians' alignment of results to statistical theories rather than to features of the study phenomena biasing inferences on the latter; Ideas that laypeople's intuitive judgements could reveal quantitative structures in complex, largely unobservable phenomena; The still unsupported claim that psychological phenomena could have quantitative properties at all and could thus be measured; The fact that psychometric structures shown for verbal item judgements can also be produced by semantic and Artificial Intelligence (AI) algorithms (e.g. ChatGPT) without collecting any empirical data. Still, most quantitative psychologists seem fairly unconcerned about the strong reliance on everyday language (e.g. in ratings scales) and the imprecise concepts of psychological measurement, perhaps because their consequences do not become as straightforwardly apparent as in other disciplines such as in physics, chemistry, and medicine, where imprecise measurement can entail the collapse of buildings, chemical explosions, or drug overdoses. But where does the loose jargon around measurement variables and psychometrics go seriously wrong in psychology? These and further contradictions, problems, and challenges underlying established quantitative practices in psychology must be addressed to tackle the discipline's continued crises and to develop new approaches that are needed to advance psychology as a science. We invite from all fields contributions that critically explore and open up new perspectives on the foundations of quantification and measurement in psychology, including perspectives still hardly considered (e.g. qualitative mathematics, complex dynamic systems, fuzzy systems, modelling, machine learning). We are also interested in methods for generating quantitative data, either executed by persons (e.g. time-based observations, computer-based coding) or by automated technology (e.g. ecological momentary monitoring, life logging, reality mining). However, other than commonly done, we are explicitly not seeking proposals for improving specific techniques of data analysis (e.g. statistical or latent variable models). Instead, our focus is on making explicit and scrutinising the implicitly underlying rationales and fundamental principles, thus the theory, philosophy, and methodology on which quantitative research in psychology currently is or should be built in the future. This also includes critical views on whether or not quantitative investigations are meaningful at all for a science exploring behaviour, mind, and society, and thus also contributions to the psychology, sociology, and philosophy of science in this field. Beyond Stereotypes Liwei Liu,2023-07-14 This book investigates parental engagement in the transition to school in China and Australia which were taken as representatives of Eastern and Western cultures respectively A positive transition to school is important for children s learning and wellbeing and parents play a critical role in it The author therefore compares Chinese and Australian parents perceptions of and engagement in the transition to school and the factors influencing it By modifying the parental engagement scale and re constructing the bioecological model of parental engagement in transition to school in the contexts of China and Australia the book offers both instrumental and theoretical contributions in the field The author further argues that parents are facing challenges and tensions brought on by both global trends and local contexts which counters people s stereotypes of Chinese and Australian parents The book will be of interest to scholars and students studying parental engagement transition to school and international comparative studies
