

Computing Discounts

OBJECTIVES
 1. Determine the amount of the original price given the sale price and the percent of discount.
 2. Determine the percent of discount given the original price and the sale price.
 3. Determine the sale price given the original price and the percent of discount.

Example 1: Discounts

Question: How do you determine the sale price of an item if you know the original price and the percent of discount?

Answer: The sale price is the original price minus the percent of discount times the original price. For example, if the original price is \$100 and the percent of discount is 20%, the sale price is \$80.

- Example 1:** The original price of a pair of shoes is \$120. The sale price is \$96. What percent of the original price is the sale price?

Solution: Let x be the percent of the original price that is the sale price. Then

$$96 = 120x$$

$$x = \frac{96}{120} = 0.8 = 80\%$$
- Example 2:** The original price of a pair of shoes is \$120. The sale price is \$96. What percent of the original price is the discount?

Solution: Let x be the percent of the original price that is the discount. Then

$$120 - 120x = 96$$

$$120 - 120x + 120x = 96 + 120x$$

$$120 = 96 + 120x$$

$$120 - 96 = 96 + 120x - 96$$

$$24 = 120x$$

$$x = \frac{24}{120} = 0.2 = 20\%$$

Answers

Example 1

| | | | |
|----------------|----------|----------|----------|
| Original Price | \$120.00 | \$120.00 | \$120.00 |
| Discount | \$24.00 | \$24.00 | \$24.00 |
| Sale Price | \$96.00 | \$96.00 | \$96.00 |
| Discount % | 20% | 20% | 20% |
| Discount | \$24.00 | \$24.00 | \$24.00 |
| Discount % | 20% | 20% | 20% |

Example 2

- The amount of the discount is the difference between the original price and the sale price: $\$120 - \$96 = \$24$.
- The discount is 20%. This amount is 20% of $\$120$.
- Since the original price is $\$120$, the sale price is $\$120 - 20\%$ of $\$120 = \96 .
