Pathways Out of Poverty During An Economic Crisis C. Peter Timmer, Neil McCulloch, 2007 Most poor people in developing countries still live in rural areas and are primarily engaged in low productivity farming activities Thus pathways out of poverty are likely to be strongly connected to productivity increases in the rural economy whether they are realized in farming in rural nonfarm enterprises or by way of rural urban migration The authors use cross sectional data from the Central Statistical Board for 1993 and 2002 as well as a panel data set from the Indonesia Family Life Survey for 1993 and 2000 to show which pathways out of poverty were most successful over this period The findings suggest that increased engagement of farmers in rural nonfarm enterprises is an important route out of rural poverty but that most of the rural agricultural poor that exit poverty still do so while remaining rural and agricultural So changes in agricultural prices wages and productivity still play a critical role in moving people out of poverty

Handbook of Development Economics, 1988 *Perspectives on Labour Economics for Development* Sandrine Cazes, Sher Verick, 2013 In developing countries labour markets play a central role in determining economic and social progress since employment status is one of the key determinants of exiting poverty and promoting inclusion Yet the reality in most developing countries is that the labour market fails to create the jobs in the formal economy that would help individuals and their families prosper In recognition of these challenges governments and other stakeholders in developing countries have increasingly prioritised policies and programmes to promote decent work However this requires navigating a range of complex issues and debates surrounding the linkages between development processes and labour market outcomes This volume consists of three main thematic parts Part I provides a broad overview of key issues including characterising the employment challenge in developing countries and the link between economic growth distribution poverty and employment Drawing on the literature and country examples Part II analyses the specific topics of wages migration and education The final section shifts to a more normative focus addressing labour market institutions and policies along with systematic approaches to quantifying labour markets in developing countries *Perspectives on Labour Economics for Development* is an invaluable reference for policy makers in middle and low income countries as well as an ideal handbook for teachers and
