**Engineering Design Applications II** Andreas Öchsner, Holm Altenbach, 2019-06-27 This book offers an update on recent developments in modern engineering design Different engineering disciplines such as mechanical materials computer and process engineering provide the foundation for the design and development of improved structures materials and processes The modern design cycle is characterized by the interaction between various disciplines and a strong shift to computer based approaches where only a few experiments are conducted for verification purposes A major driver for this development is the increased demand for cost reduction which is also linked to environmental demands In the transportation industry e.g. automotive or aerospace the demand for higher fuel efficiency is related to reduced operational costs and less environmental damage One way to fulfil such requirements is lighter structures and/or improved processes for energy conversion Another emerging area is the interaction of classical engineering with the health and medical sector
