**Security in Computing Systems** Joachim Biskup,2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously

**Aspects of Personal Privacy in Communications - Problems, Technology and Solutions** Geir M. Koen,Vladimir a. Oleshchuk,2025-01-13 The modern society is rapidly becoming a fully digital society This has many benefits but unfortunately it also means that personal privacy is threatened The threat does not so much come from a 1984 style Big Brother but rather from a set of smaller big brothers The small big brothers are companies that we interact with they are public services and institutions Many of these little big brothers are indeed also being invited to our private data by

ourselves Privacy as a subject can be problematic At the extreme it is personal freedom against safety and security We shall not take a political stand on personal privacy and what level of personal freedom and privacy is the correct one Aspects of Personal Privacy in Communications is mostly about understanding what privacy is and some of the technologies may help us to regain a bit of privacy We discuss what privacy is about what the different aspects of privacy may be and why privacy needs to be there by default There are boundaries between personal privacy and societal requirements and inevitably society will set limits to our privacy Lawful Interception etc There are technologies that are specifically designed to help us regain some digital privacy These are commonly known as Privacy Enhancing Technologies PETs We investigate some these PETs including MIX networks Onion Routing and various privacy preserving methods Other aspects include identity and location privacy in cellular systems privacy in RFID Internet of Things IoT and sensor networks amongst others Some aspects of cloud systems are also covered
