#### **Recent Advances of Epigenetics**

**in Crop Biotechnology** Clelia De-la-Peña, Raúl Alvarez-Venegas, Christopher Cullis, 2016-05-31 Epigenetics is a new field that explains gene expression at the chromatin structure and organization level Three principal epigenetic mechanisms are known and hundreds of combinations among them can develop different phenotypic characteristics DNA methylation histone modifications and small RNAs have been identified and their functions are being studied in order to understand the mechanisms of interaction and regulation among the different biological processes in plants Although fundamental epigenetic mechanisms in crop plants are beginning to be elucidated the comprehension of the different epigenetic mechanisms by which plant gene regulation and phenotype are modified is a major topic to develop in the near future in order to increase crop productivity Thus the importance of epigenetics in improving crop productivity is undoubtedly growing Current research on epigenetics suggest that DNA methylation histone modifications and small RNAs are involved in almost every aspect of plant life including agronomically important traits such as flowering time fruit development responses to environmental factors defense response and plant growth The aim of this Research Topic is to explore the recent advances concerning the role of epigenetics in crop biotechnology as well as to enhance and promote interactions among high quality researchers from different disciplines such as genetics cell biology pathology microbiology and evolutionary biology in order to join forces and decipher the epigenetic mechanisms in crop productivity

**Grazing in Future Multi-scapes: From Thoughtscapes to Landscapes, Creating Health from the Ground Up** Pablo Gregorini, Iain James Gordon, Carol Kerven, Fred Provenza, 2022-09-27 This Research Topic is hosted in partnership with the Grazing in Future Multi Scapes international workshop The workshop will be held online 30th May 5th June 2021 Throughout different landscapes of the world grazing herbivores fulfill essential roles in ecology agriculture economies and cultures including families farms and communities Not only do livestock provide food and wealth they also deliver ecosystem services through the roles they play in environmental composition structure and dynamics Grazing as a descriptive adjective locates herbivores within a spatial and temporal pastoral context where they naturally graze or are grazed by farmers ranchers shepherds etc In many cases however pastoralism with the single objective of maximizing animal production and or profit has transformed landscapes diminishing biodiversity reducing water and air quality accelerating loss of soil and plant biomass and displacing indigenous animals and people These degenerative landscape transformations have jeopardized present and future ecosystem and societal services breaking the natural integration of land water air health society and culture Land users policy makers and societies are calling for alternative approaches to pastoral systems a call for diversified adaptive and integrative agro ecological and food pastoral systems designs that operate across multiple scales and scapes e g thought social land food health wild scapes simultaneously There needs to be a paradigm shift in pastoral production systems and how grazing herbivores are managed grazed within them derived initially from a change in perception of how they provide wealth The thoughtscales will include paradigm shifts where grazers move away from the actual archetype of pastoralism future

landscapes are re imagined and regenerative and sustainable management paradigms are put in place to achieve these visions From this will come a change in collective thinking of how communities and cultures socialscapes perceive their relationships with pastoral lands The landscapes are the biotic and abiotic four dimensional domains or environments in need of nurture Landscapes are the tables where humans and herbivores gain their nourishment i e foodscapes Foodscapes and dietary perceptions dictate actions and reactions that are changing as developed countries grapple with diseases related to obesity and people starve in developing countries Societies are demanding healthscapes and nutraceutical foodscapes and paradoxically some are moving away from animal products While indigenous species of animals including humans wildscapes have been displaced from many of their lands by monotonic pastoralism multifunctional pastoral systems can be designed in view of dynamic multi scapes of the future The purpose of this Research Topic is to influence future mental and practical models of pastoralism in continually evolving multi scapes We seek a collection of papers that will cultivate such a shift in thinking towards future models of sustainable multipurpose pastoralism The contributions will be synthesized to establish how multifunctional pastoral systems can be re imagined and then designed in view of the integrative dynamics of sustainable future multi scapes

*Breeding Forage and Grain Legumes for Sustainable Protein Production* Åshild Ergon, Leif Skot, Deyue Yu, Thomas Wood, 2025-08-27 The legume family Fabaceae is an important plant family for the provision of food and feed Legumes have symbiosis with nitrogen fixing bacteria giving them highly valuable agronomic characteristics reduced needs for fertilizer application products with a high protein content and improved agronomic environmental and economic sustainability Less investments have been made in breeding of improved varieties of grain and forage legumes compared to grain and forage species in the grass family In order to fulfill the protein needs of the future and make use of the advantages that legumes can provide it is necessary to develop efficient breeding strategies for the legume crops and improve diversification crop productivity yield stability and protein quality of the products This Research Topic aims to gather key contributions resulting from a Horizon 2020 project EUCLEG Breeding Forage and Grain Legumes to Increase EU s and China s Protein Self Sufficiency We welcome all article types falling under the following topics Development of molecular marker resources and genotyping tools for breeding purposes Genetic resources characterization of genetic variation structure and accessibility to data and seeds in gene banks Characterization of traits and its variation phenotyping methodology and genetic control of traits Development of new breeding methods We acknowledge the initiation of this Research Topic by the EUCLEG Breeding Forage and Grain Legumes to Increase EU s and China s Protein Self Sufficiency Horizon 2020 project Dr Åshild Ergon is responsible for the contribution from the Norwegian University of Life Sciences Dr Leif Skot is responsible for the contribution from Aberystwyth University and Dr Deyue Yu is responsible for the contribution from Nanjing Agricultural University Dr Thomas Henry Noel Ellis and Dr Thomas Wood are not participants of the EUCLEG project
