ECOSYSTEMS  
BY  
JABARI  
DAVID**

**The Forest Ecosystem**

Take us to a forest ecosystem. The forest is a good example of how organisms have adapted to living in the forest ecosystem.

The most obvious animal in the forest is the squirrel. The squirrel's adaptation is made by the tree and acorns. The squirrel uses its tail to balance and catch acorns. The squirrel also uses its tail to store food for the winter. The squirrel also uses its tail to help it climb trees.

The birds in the forest are also adapted to living in the forest. The birds use their wings to fly and their beaks to catch food. The birds also use their feet to grip onto tree branches.

The plants in the forest are also adapted to living in the forest. The trees use their leaves to capture sunlight and their roots to absorb water. The plants also use their leaves to release oxygen into the air.

Animals need clean water. There are more than 50 percent water and need a steady source of it to grow and stay healthy. They "drink" in the water using their lungs. Many animals such as fish, turtles and snakes live in the water and need to stay there. Forest animals are adapted to living, capturing and releasing oxygen and releasing it into the atmosphere and rivers, and are the most effective land cover for maintenance of water quality.
