CHAPTER 17 THE HISTORY OF LIFE

LECTURE OUTLINE

Case Study: Little People, Big Story

17.1 How Did Life Begin?

- A. Life Was Thought to Have Developed from Living and Nonliving Matter Through Spontaneous Generation
- B. Experiments Refuted Spontaneous Generation (Figure 17-1)
 - 1. In the mid-1800s, this idea was refuted by Louis Pasteur and John Tyndall
- C. The First Living Things Arose from Nonliving Ones
 - 1. Oparin and Haldane hypothesized that organic molecules could have formed through ordinary chemical reactions on the early Earth
 - 2. Organic molecules can form spontaneously under prebiotic conditions
 - a. In 1953, the Miller-Urey experiment showed a possible origin of organic molecules (Figure 17-2)
 - b. In recent years, new evidence has convinced scientists that the early Earth atmosphere was probably different from what Miller and Urey predicted, but their results are still considered important
- 3. **Lecture Activity 17.1: The Miller-Urey Experiment**
- 3. Organic molecules can accumulate under prebiotic conditions
 - a. Molecules may have accumulated in the oceans, away from the sun's destructive UV radiation
- 4. Clay may have catalyzed the formation of larger organic molecules
- D. RNA May Have Been the First Self-Reproducing Molecule
 - 1. RNA can act as a catalyst
 - a. Ribozymes are RNA molecules that can catalyze a variety of reactions involving RNA (Figure 17-3)
 - 2. Earth may once have been an RNA world

Waking the Power Within Thermodynamics and the Human Battery Professor Ibrahim elnoshokaty , The sci fi film The Matrix introduces a fascinating premise where humans function as energy sources for an advanced machine society In this fictional world human bodies are maintained in a state of suspended animation while their minds exist in a virtual reality allowing machines to extract their bioelectric thermal and kinetic energy This article investigates the scientific feasibility of utilizing humans as a power source by applying thermodynamic principles According to the first law of thermodynamics the energy required to sustain human life would result in a net energy loss for the machines The second law indicates that the system's entropy would rise rendering it an inefficient energy strategy Furthermore the energy output of a human body even if fully utilized would be inadequate to meet the machines energy demands More efficient alternatives for the machines would include other biological power sources and energy harvesting techniques such as solar or nuclear power The article concludes that while the concept of human batteries serves as an engaging storytelling element it is not a scientifically viable solution for the machines energy requirements The machines choice to preserve human life may be motivated by other factors such as leveraging their collective cognitive abilities for computational purposes or adhering to an ethical code that prohibits the complete annihilation of humanity This investigation aims to fill the gap by providing a detailed thermodynamic analysis of the energy expenditure required to sustain human life in a suspended animation state and the inefficiency of this system as an energy source for machines a facet previously unexplored By elucidating the thermodynamic constraints of human based energy sources this study not only challenges a popular sci fi narrative but also enriches our understanding of bioenergetic processes and their implications for

future energy harvesting technologies Theistic Evolution J. P. Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. The Timetree of Life S. Blair Hedges, Sudhir Kumar, 2009-04-23 The evolutionary history of life includes two primary components phylogeny and timescale Phylogeny refers to the branching order relationships of species or other taxa within a group and is crucial for understanding the inheritance of traits and for erecting classifications However a timescale is equally important because it provides a way to compare phylogeny directly with the evolution of other organisms and with planetary history such as geology climate extraterrestrial impacts and other features The Timetree of Life is the first reference book to synthesize the wealth of information relating to the temporal component of phylogenetic trees In the past biologists have relied exclusively upon the fossil record to infer an evolutionary timescale However recent revolutionary advances in molecular biology have made it possible to not only estimate the relationships of many groups of organisms but also to estimate their times of divergence with molecular clocks The routine estimation and utilization of these so called time trees could add exciting new dimensions to biology including enhanced opportunities to integrate large molecular data sets with fossil and biogeographic evidence and thereby foster greater communication between molecular and traditional systematists They could help estimate not only ancestral character states but also evolutionary rates in numerous categories of organismal phenotype establish more reliable associations between causal historical processes and biological outcomes develop a universally standardized scheme for biological classifications and generally promote novel avenues of thought in many arenas of comparative evolutionary biology This authoritative reference work brings together for the first time experts on all major groups of organisms to assemble a timetree of life The result is a comprehensive resource on evolutionary history which will be an indispensable reference for scientists educators and students in the life sciences earth sciences and molecular biology For each major group of organism a representative is illustrated and a timetree of families and higher taxonomic groups is shown Basic aspects of the evolutionary history of the group the fossil record and competing hypotheses of relationships are discussed Details of the divergence times are presented for each node in the timetree and primary literature references are included The book is complemented by an online database www.timetree.net which allows researchers to both deposit and retrieve data
