**Symmetry and Exact Solutions of Nonlinear Mathematical Physics Equations** Gangwei Wang,Xiangpeng Xin ,Samir A. El-Tantawy,2024-08-13 Nonlinear problems originating from applied science that is closely related to practices contain rich and extensive content It makes the corresponding nonlinear models also complex and diverse Due to the intricacy and contingency of nonlinear problems unified mathematical methods still remain far and few between In this regard the comprehensive use of symmetric methods along with other mathematical methods becomes an effective option to solve nonlinear problems Methods for Solutions of Nonlinear Ordinary Differential Equations, Applications Demetrios G. Magiros,1968

**Computation of the Steady-state Solution of Nonlinear Circuits with Time-domain and Large-signal-small-signal Analysis Methods** Hannu Jokinen,1997 *Differential and Integral Calculus* N. Piskunov,1965 *(Almost) Impossible Integrals, Sums, and Series* Cornel Ioan Vălean,2019-05-10 This book contains a multitude of challenging problems and solutions that are not commonly found in classical textbooks One goal of the book is to present these fascinating mathematical problems in a new and engaging way and illustrate the connections between integrals sums and series many of which involve zeta functions harmonic series polylogarithms and various other special functions and constants Throughout the book the reader will find both classical and new problems with numerous original problems and solutions coming from the personal research of the author Where classical problems are concerned such as those given in Olympiads or proposed by famous mathematicians like Ramanujan the author has come up with new surprising or unconventional ways of obtaining the desired results The book begins with a lively foreword by renowned author Paul Nahin and is accessible to those with a good knowledge of calculus from undergraduate students to researchers and will appeal to all mathematical puzzlers who love a good integral or series *Differential Equations* O.A. original research papers presented at the 4th International Conference on Computational Mathematics and Engineering Sciences held at Akdeniz University Antalya Turkey on 20-22 April 2019. Focusing on computational methods in science, mathematical tools applied to engineering, mathematical modeling and new aspects of analysis, the book discusses the applications of mathematical modelling in areas such as health science, engineering, computer science, social science and economics. It also describes a wide variety of analytical, computational and numerical methods. The conference aimed to foster cooperation between students and researchers in the areas of computational mathematics and engineering sciences and provide a platform for them to share significant research ideas. This book is a valuable resource for graduate students, researchers and educators interested in the mathematical tools and techniques required for solving various problems arising in science and engineering and understanding new methods and uses of mathematical analysis.

Recent Progress in the Theory of the Euler and Navier-Stokes Equations James C. Robinson, José L. Rodrigo, Witold Sadowski, Alejandro Vidal-López, 2016-01-21. The rigorous mathematical theory of the Navier-Stokes and Euler equations has been a focus of intense activity in recent years. This volume, the product of a workshop in Venice in 2013, consolidates surveys and further advances the study of these canonical equations. It consists of a number of reviews and a selection of more traditional research articles on topics that include classical solutions to the 2D Euler equation, modal dependency for the 3D Navier-Stokes equation, zero viscosity Boussinesq equations, global regularity and finite time singularities, well-posedness for the diffusive Burgers equations and probabilistic aspects of the Navier-Stokes equation. The result is an accessible summary of a wide range of active research topics written by leaders in their field together with some exciting new results. The book serves both as a helpful overview for graduate students new to the area and as a useful resource for more established researchers.

**Subject Guide to Books in Print**, 1997     *Indian Book Industry*, 1982-10     *American Journal of Physics*, 1993

The Publishers' Trade List Annual, 1970     *An Introduction to Fronts in Random Media* Jack Xin, 2009-06-17. This book

aims to give a user-friendly tutorial of an interdisciplinary research topic: fronts or interfaces in random media to senior undergraduates and beginning graduate students with basic knowledge of partial differential equations (PDE) and probability. The approach taken is semiformal, using elementary methods to introduce ideas and motivate results as much as possible, then outlining how to pursue rigorous theorems with details to be found in the references section. Since the topic concerns both differential equations and probability and probability is traditionally a quite technical subject with a heavy measure-theoretic component, the book strives to develop a simplistic approach so that students can grasp the essentials of fronts and random media and their applications in a self-contained tutorial. The book introduces three fundamental PDEs: the Burgers equation, Hamilton-Jacobi equations and reaction-diffusion equations, analysis of their formulas and front solutions and related stochastic processes. It builds up tools gradually so that students are brought to the frontiers of research at a steady pace. A moderate number of exercises are provided to consolidate the concepts and ideas. The main methods are representation

formulas of solutions Laplace methods homogenization ergodic theory central limit theorems large deviation principles variational principles maximum principles and Harnack inequalities among others These methods are normally covered in separate books on either differential equations or probability It is my hope that this tutorial will help to illustrate how to combine these tools in solving concrete problems
