Railway Applications - Polymeric Composite Sleepers, Bearers and Transoms, 2022 Railway Applications. Polymeric Composite Sleepers, Bearers and Transoms British Standards Institution, 2022 **Railway Applications - Polymeric Composite Sleepers, Bearers and Transoms**, 2022 *Micro and Nano Fibrillar Composites (MFCs and NFCs) from Polymer Blends* Raghvendra Kumar Mishra, Sabu Thomas, Nandakumar Kalarikkal, 2017-06-19 *Micro and Nano Fibrillar Composites MFCs and NFCs from Polymer Blends* is a comprehensive reference for researchers students and scientists working in the field of plastics recycling and composites The book aims to determine the influence of micro and nanofibrillar morphology on the properties of immiscible blend systems Chapters cover micro and nanofibrillar composites based on polyolefin liquid crystal polymer biodegradable polymers polyester and polyamide blends in various industrial application fields The book brings together panels of highly accomplished experts in the field of plastics recycling blends and composites systems For several decades plastic technology has played an important role in many industrial applications such as packaging automobiles aerospace and construction However the increasing use of plastics creates a lot of waste This has led to restrictions on the use of some plastics for certain applications and a drive towards recycling of plastics More recently microfibrillar in situ composites have been prepared from waste plastics such as PET PP PET PE and Nylon PP as a way of formulating new high performance polymer systems This book tackles these issues and more and is an ideal resource for anyone interested in polymer blends Provides information on MFC and NFC based polymer blends that have been accumulated over the last 25 years providing a useful reference Adopts a novel approach in terms of understanding the relationship between processing morphology structure properties and applications in micro and nanofibrillar composites Contains contributions from leading experts in the field from both industrial and academic research **BS ISO 12856-1. Polymer Fillers and Stiffening Agents Chris Defonseka, 2020-07-20 This book presents both established and emerging technologies which show the immense possibilities of using non traditional fillers and stiffening agents in the plastics industry After an introduction to basic polymer chemistry a range of non petroleum based fillers and stiffening agents for polymer products are identified and their optimal applications given **Surface Treatment Methods of Natural Fibres and their Effects on Biocomposites** Asim Shahzad, Fulga Tanasa, Carmen-Alice Teaca, 2022-03-25 Natural fiber composites have experienced a renaissance over the last two decades as a response to societal demands for developing eco friendly biodegradable and recyclable materials They are now being extensively used in everyday products as well as in automotive packaging sports and the construction industries These fibers require surface treatments in order to improve their properties and interfacial bonding with polymer matrices and to reduce their hydrophilic character These methods can be grouped into three major categories chemical physical and biological Chemical methods use chemical reagents to reduce fibers

hydrophilic tendency and thus improve compatibility with the matrix They also expose more reactive groups on the fibre surface to facilitate efficient coupling with the matrix Physical methods change structural and surface properties of the fiber and thereby influence the interfacial bonding with matrices without extensively changing the chemical composition of the fibers They are cleaner and simpler than the chemical methods Biological methods use biological agents like fungi enzymes and bacteria to modify the fiber surface properties These methods are not toxic like chemical methods and are not energy intensive like physical methods Surface Treatment Methods of Natural Fibers and their Effects on Biocomposites presents an overview and recent developments of these methods All the major methods are reviewed explaining the science and methodology behind each method The effects of these methods on various properties of fibers and the biocomposites made from these fibers are analyzed in detail The book will be an essential reference for academic researchers materials scientists and engineers postgraduate students and industrial researchers and development scientists and engineers working on natural fibers and biocomposites Extensive coverage of all the surface modification methods chemical physical biological of natural fibers and its effect on properties of produced composites The chemical mechanisms which are utilized in surface treatments are discussed in detail and how these affect the interfacial properties and characteristics Systematic and comprehensive review on surface modifications of natural fibres and explains how the effect of the surface treatment can be characterized and measured as well as the effect on properties

Proceedings of the 2nd International Conference on Geosynthetics and Environmental Engineering Han-Yong Jeon,2024-12-01 This book presents selected papers from the 2nd Proceedings of the International Conference on Geosynthetics and Environmental Engineering ICGEE 2024 held in Busan South Korea covering topic areas in geosynthetic applications and sustainability civil and structural engineering and environmental engineering and science The published articles cover the latest research studies with the focus of discussing the relationship between geotechnical materials and environmental engineering in depth to solve complex geosynthetics issues in civil and environmental engineering It also highlights state of the art technologies adopted by the relevant industries which are not only commercially viable but also environmentally sustainable The content of the papers appeals to researchers and industrial practitioners working in the field of geoenvironmental engineering
