Principles of Animal Behavior Samantha Morales, 2021-11-16

The scientific study of animal behavior is conducted under the domain of ethology. It primarily focuses on the behavior of animals under natural conditions and views it as an evolutionary adaptive trait. It generally focuses on behavioral processes instead of particular animal groups. Understanding of animal behavior plays an important role in animal training. Some of the learning characteristics which are studied within this field are habituation, associative learning, imprinting, and observational learning. Ethology also studies animal communication and emotions in animals. Communication in animals refers to the transfer of information from a single animal or a group of animals to one or more animals. Such information generally affects the current or future behavior of the receivers. This book unfolds the innovative aspects of animal behavior which will be crucial for the

holistic understanding of the subject matter Some of the diverse topics covered in this book address the varied branches that fall under this category It will serve as a valuable source of reference for those interested in this field

Behavior of Marine Animals Joanna Burger, Bori L. Olla, Howard E. Winn, 2013-11-21 The majority of the chapters in this volume are structured to include a balance between literature review original data and synthesis The research approaches taken by the authors are generally of two kinds One centers on the long term in depth study of a single species in which many aspects of its natural history are examined in detail The other is a comparative one which involves investigating particular questions by examining species or by comparing groups of species that may include taxonomic and/or ecological affinities Most of the chapters concern obvious aspects of breeding behavior including habitat selection the effects of age on breeding communication mating systems synchrony of breeding activities development of behavior pre fledging parental care and post fledging parental care Of these topics many relate directly to the advantages and disadvantages of coloniality a conspicuous behavior pattern in marine birds As such they provide a paradigm for the further study of coloniality and the social behavior of many other animals Other important areas of marine bird breeding behavior such as courtship behavior antipredator behavior information transfer have not been included because of space limitations Since man's encroachment on the seashore and continental shelf poses certain threats to marine birds a volume elucidating various aspects of their biology has multiple uses As well as being of value to ornithologists the volume should be useful to managers involved with coastal planning

Evolutionary Behavioral Ecology David Westneat, Charles W. Fox, 2010-04 Evolutionary Behavioral Ecology presents a comprehensive treatment of the evolutionary and ecological processes shaping behavior across a wide array of organisms and a diverse set of behaviors and is suitable as a graduate level text and as a sourcebook for professional scientists

Animal Communication and Cognition Tabitha Wagner, 2015 Visual signals that are designed for effective communication are complex Over the years researchers interested in the study of animal communication have employed various artificial stimuli during behavioral experiments to precisely control what the observers get to see or experience These diverse techniques to stage animal interactions have offered an alternative to the traditional experimental methods relying on the use of live companions or demonstrators This book begins with a discussion on computer animated stimuli to investigate visual communication in lizards It then discusses the pretend play in signing chimpanzees the evolution of TRP channels as mediators of pheromone signaling and the role of cuticular hydrocarbon based chemical communication in prezygotic reproductive isolation
