

Prokaryotic and Eukaryotic Cells

(Do all cells have their same structure?)

WHY?
IF?

An eukaryotic organism has a structural advantage. The cell nucleus allows you to keep your ribosomes and structural genes separate from all the other genes. It is a simple case of having a separate space. It is made up of a large, double-membrane space with many regulatory regions. These are used for checking, editing, accepting, rejecting, and other various things. The nucleus is a separate, self-contained unit that is not attached to the rest of the cell. The rest of the cell is a simple cell body or cytoplasm. In this section, we will be looking at cells that are not eukaryotic. We will be looking at prokaryotic cells. We will be looking at the structure of a prokaryotic cell.
