Modelling and Simulation of Complex Systems for Sustainable Energy Efficiency II Ahmed Hammami, Abdel Kader Mahmoud, Ahmed Mohamed Yahya, Philippus Stephanus Heyns, Majdi Yangui, Mohamed Haddar, 2025-09-30 This book provides readers with an overview of recent theories and methods for studying complex mechanical systems used in energy production. The emphasis is put on strategies for increasing energy efficiency and on recent industrial applications. Topics cover design modeling and control of hybrid energy systems, dynamic behaviour of composites, structural vibration, multiphysics, dynamic systems, fault diagnosis, and robust design. Based on peer review contributions and invited talks presented at the second International Workshop on Modelling and Simulation of Complex Systems for Sustainable Energy Efficiency MOSCOSSEE 2024 held on November 2-3, 2024 in Matmata Gabes, Tunisia, this book offers timely information on methods and tools for application in renewable energy production. It provides a valuable resource to both academics and professionals and a bridge to facilitate communication between the two groups. The conference was organised by The Laboratory of Mechanics Modelling and Production LA2MP at the National School of Engineers of Sfax from University of Sfax, Tunisia; the department of Mechanical Engineering at the National School of Engineers of Gabes from the University of Gabes; and the Applied Research Unit for Renewable Energy, Water and the Environment from University of Nouakchott, Mauritania.

VIBRATION AND NOISE REDUCTION IN PLANETARY GEAR TRAIN BY PHASING Ashutosh Mokate, 2016-03-10 Gears are essential parts of many precision power transmitting machines such as automobiles. The major functions of a gearbox are to transform speed and torque in a given ratio and to change the axis of rotation. Planetary gears yield several advantages over conventional parallel shaft gear systems. They produce high speed reductions in compact spaces, a greater load sharing, a higher torque to weight ratio, diminished bearing loads, and reduced noise and vibration. They are used in automobiles, helicopters, aircraft engines, heavy machinery, and a variety of other applications. Despite their advantages, the noise induced by the vibration of planetary gear systems remains a key concern. Planetary gears have received considerably less research attention than single mesh gear pairs. There is a particular scarcity of analysis of two planetary gear systems and their dynamic response. Hence, this book focuses on the study of two PGTs with different phasing angular positions while every individual set remains unchanged.

CADAM 2012 - Proceedings , Advances in Mechanical Design Jianrong Tan, 2022-03-15 This book focuses on innovation. Main objectives are to bring the community of researchers in the fields of mechanical design together to exchange and discuss the most recent investigations, challenging problems, and new trends, and to encourage the wider implementation of the advanced design technologies and tools in the world, particularly throughout China. The theme of 2021 ICMD is Interdisciplinary and Design Innovation, and this conference is expected to provide an excellent forum for cross-fertilization of ideas so that more general, intelligent, robust, and computationally economical mechanical design methods are created for multi-disciplinary applications.

Simulating Fatigue Crack Growth in Spiral Bevel Pinion, 2003 New results for predicting crack trajectory and fatigue life for a spiral bevel pinion using the Finite Element Method FEM are reported The predictions presented are based on linear elastic fracture mechanics combined with the FEM incorporating plasticity induced fatigue crack closure and moving gear tooth loads The analyses were carried out using a parallel FEM solver which calculates stress intensity factors using equivalent domain J integral method Fatigue life predictions were made based on a modified Paris model incorporating crack closure To obtain a more detailed understanding of the contact between a cracked pinion tooth in mesh with an uncracked gear tooth three dimensional contact analyses were performed on a spiral bevel gear set incorporating a crack The goal in carrying out these analyses was to capture the redistribution of contact loads due to

crack growth Results of these analyses showed the expected trend of decreasing tooth loads carried by the cracked tooth with increasing crack length It was also showed that this decrease in contact loads had an impact on the stress intensity factor values and therefore would also affect the crack trajectory and fatigue life predictions *Power Transmissions* Datong Qin,2016-11-10 This book presents papers from the International Conference on Power Transmissions 2016 held in Chongqing China 27th 30th October 2016 The main objective of this conference is to provide a forum for the most recent advances addressing the challenges in modern mechanical transmissions The conference proceedings address all aspects of gear and power transmission technology and a range of applications The presented papers are catalogued into three main tracks including design simulation and testing materials and manufacturing and industrial applications The design simulation and testing track covers topics such as new methods and designs for all types of transmissions modelling and simulation of power transmissions strength fatigue dynamics and reliability of power transmissions lubrication and sealing technologies and theories and fault diagnosis of power transmissions In the materials and manufacturing track topics include new materials and heat treatment of power transmissions new manufacturing technologies of power transmissions improved tools to predict future demands on production systems new technologies for ecologically sustainable productions and those which preserve natural resources and measuring technologies of power transmissions The proceedings also cover the novel industrial applications of power transmissions in marine aerospace and railway contexts wind turbines the automotive industry construction machinery and robots *Papers Presented at the AIAA/ASME/SAE/ASEE 25th Joint Propulsion Conference* ,1989 **50th Anniversary of the Design Engineering Division** American Society of Mechanical Engineers,Bahram Ravani,American Society of Mechanical Engineers.
