Handbook of Modern Ferromagnetic Materials Alex Goldman, 2012-12-06 Below is a copy of Professor Takeshi Takei's original preface that he wrote for my first book *Modern Ferrite Technology*. I was proud to receive this preface and include it here with pride and affection. We were saddened to learn of his death at 92 on March 12, 1992. Preface: It is now some 50 years since ferrites debuted as an important new category of magnetic materials. They were prized for a range of properties that had no equivalents in existing metal magnetic materials and it was not long before full fledged research and development efforts were underway. Today ferrites are employed in a truly wide range of applications and the efforts of the many men and women working in the field are yielding many highly intriguing results. New high performance products are appearing one after another and it would seem we have only scratched the surface of the hidden possibilities of these fascinating materials. Dr. Alex Goldman is well qualified to talk about the state of the art in ferrites. For many years Dr. Goldman has been heavily involved in the field as director of the research and development division of Spang Co and other enterprises. This book *Modern Ferrite Technology* based in part on his own experiences presents a valuable overview of the field. It is testimony to his commitment and bountiful knowledge about one of today's most intriguing areas of technology.

Magnetic Components for Power Electronics Alex Goldman, 2012-12-06 *Magnetic Components for Power Electronics* concerns the important considerations necessary in the choice of the optimum magnetic component for power electronic applications. These include the topology of the converter circuit, the core material, shape, size and others such as cost and potential component suppliers. These are all important for the design engineer due to the emergence of new materials, changes in supplier management and the examples of several component choices. Suppliers using this volume will also understand the needs of designers. Highlights include: Emphasis on recently introduced new ferrite materials such as those operating at megahertz frequencies and under higher DC drive conditions. Discussion of amorphous and nanocrystalline metal materials. New technologies such as resonance converters, power factors correction (PFC) and soft switching. Catalog information from over 40 magnetic component suppliers. Examples of methods of component choice for ferrites, amorphous, nanocrystalline materials. Information on supplier management changes such as those occurring at Siemens, Philips, Thomson and Allied Signal. Attention to the increasingly important concerns about EMI. This book should be especially helpful for power electronic circuit designers, technical executives and material science engineers involved with power electronic components.

Biotechnology-4 S. Mahesh, 2003 This book is designed as per the syllabus of Biotechnology Paper IV prescribed by Bangalore University. It also fully covers the second year degree Biotechnology Vocational Course prescribed by the University Grants Commission, UGC, New Delhi. The book is divided into three parts as follows: Recombinant DNA Technology, Environmental Biotechnology, Animal Cell Culture. The presentation in each part is simple and systematic. The basic concepts have been clearly explained and their functions are adequately highlighted. A few recent
