

Rock Correlation Lab Activity

The Cayuga Lake Basin contains one of the scenic Finger Lakes of central New York State. During the Devonian Period, this area was under a warm, shallow sea. Sediments deposited on this seafloor led to the formation of sedimentary rock up to 1200 meters thick. Many quarries, road cuts, and spectacular gorges allow the study of these rock layers. By correlating the rocks of different outcrops, geologists have been able to determine the order in which the layers were formed. A **stratigraphic column** shows all the rocks in an area in this order. In this activity, you will construct such a column for the Cayuga Lake Basin, using information from nine outcrops.

Procedure

- The following page shows cross sections of nine outcrops in the Cayuga Lake Basin. Study the cross sections and identify the types of sedimentary rocks that occur in each.
- On the back of each cross section, draw an arrow pointing to the top of the page. (You will need the arrow to identify which way is "up.")

CAUTION: Use care when working with scissors.

- Turn the page back over and color each rock type using this color code:

Sandy shale	Light Brown
Sandstone	Light Orange
Shale	Grey
Limestone	Yellow
Dolomite	Pink
Black Shale	Black

- When you have completed the coloring of your rock columns carefully cut out each cross section.
- Lay the cross sections on your desk and move them around to match the rocks of one outcrop with similar rocks in other outcrops.
- Once you have matched all of the cross sections, tape or glue them to a separate sheet of paper to form a single stratigraphic column. The cross sections will overlap each other where layers are duplicated. Slide (overlap) each rock layer until you find at least 3 perfectly overlapping layers – then they fit together.
- Attach a color key to your stratigraphic column. Remember there is only one correct solution.
- The data table *Devonian Rock Units of the Cayuga Lake Basin* describes the rock layers in your column.
- The oldest rock units are at the bottom, and the youngest are at the top. **Use the table to label each of the rock units in your column once you have completed your stratigraphic column.**

LAB SKILLS AND OBJECTIVES

- **Construct** a stratigraphic column by correlating rock outcrops.
- **Analyze** a stratigraphic column to learn about a region's geologic history.

MATERIALS

- scissors
- paste or glue
- construction paper, 1 piece 40 cm long
