Halogenated derivatives of simple hydrocarbons like chloro and fluoromethanes and ethanes are important chemicals in many industries for example as working media in organic Rankine cycles and refrigerating processes. Although there are ecological reasons against using these substances it is expected that they cannot be substituted in all cases. But optimizing the processes in which these substances have to be used can also contribute to minimizing the possible damage. This book summarizes the extensive experimental material available on the thermodynamic properties of 16 pure and mixed halogenated hydrocarbons so that it can easily be used both by process and design engineers. The project was initiated by the late Professor Dr Ing Eberhard Bender and Prof Dr Ing Dr Ing E h H D Baehr. We would like to express our gratitude especially to Prof Baehr for his continuing interest and to Springer Verlag for their patience. Besides the authors quite a large number of students contributed to the completion of the book. Among them we are most obliged to Mr L Hoffmann and Mr F Strepp for their assistance in preparing tables, diagrams and charts. We hope that this book will prove to be useful to many colleagues and we welcome proposals, advice and comments.
