

Chapter 8: System software: Answers to coursebook questions and to Worksheet questions

Syllabus sections covered: 5.1 and 5.2

From the coursebook

Task 8.01

The task refers to individual points made in this section of the coursebook but learners might wish to expand the scope, for instance to include backup, which could be entered under one of three categories. Some decisions are subjective so there are not necessarily right and wrong answers. Learners should be able to see links between bullet points. For example, access control mechanisms can be linked to ensuring data privacy, resolution of conflicts when processes use the same resource can be linked to memory usage optimisation and to control of usage of devices by processes. Hopefully this task will encourage learners to read a little more thoroughly and gain better understanding.

Question 8.01

It could be argued that all tasks are assisting the user, but aspects that are more difficult to categorise are security management and error detection and recovery, which have user-oriented aspects, and others that are just about keeping the system running. Probably the best approach for choosing tasks that are intended to assist the user is to ask which ones involve direct action by the user. This leads definitely to the user–system interface and file management, and possibly to security management and error detection and recovery. For the latter two, the user tends to have concerns about data privacy that require specific measures to be taken. The user might have to make decisions about recovery from error.

Task 8.02

This is self-explanatory.

Question 8.02

This is self-explanatory.

Task 8.03
