Lactic acid fermentation of human excreta for agricultural application Nadejda Andreev, 2017-11-14 Human excreta is a valuable fertilizer for improving soil quality and crop productivity with a potential to replace or complement the mineral fertilizers The main challenges related to human excreta regarding agricultural applications are microbial contamination risks loss of nutrients and odor issues Fertilization by lacto fermented faeces supplemented by biochar has benefits such as improved soil bulk density nitrate and potassium concentrations as well as the yield and yield components of corn compared to untreated simple stored faeces urine cattle manure and unfertilized controls Even though the mineral fertilizer produced corn with significantly higher height and leaf length it did not add significantly higher yields than lacto fermented faeces supplemented by biochar A faeces treatment process by combined lacto fermentation with thermophilic composting and biochar supplementation had better reduction of coliforms *Escherichia coli* *Enterococcus faecalis* and *Clostridium perfringens* and higher germination of radish and growth of tomatoes than combined lacto fermentation with vermicomposting Urine lacto fermentation contributed to a pH reduction below 4 a decrease in the ammonium concentration and odor strength as well as an increase in the germination rates compared to untreated stored urine The results of this study provide important information that can set the basis for scaling up a sustainable technology for the treatment of source separated human excreta while improving its potential for resource recovery

The European Nitrogen Assessment Mark A. Sutton, Clare M. Howard, Jan Willem Erisman, Gilles Billen, Albert Bleeker, Perine Grennfelt, Hans van Grinsven, Bruna Grizzetti, 2011-04-14 Presenting the first continental scale assessment of reactive nitrogen in the environment this book sets the related environmental problems in context by providing a multidisciplinary introduction to the nitrogen cycle processes Issues of upscaling from farm plot and city to national and continental scales are addressed in detail with emphasis on opportunities for better management at local to global levels The five key societal threats posed by reactive nitrogen are assessed providing a framework for joined up management of the nitrogen cycle in Europe including the first cost benefit analysis for different reactive nitrogen forms and future scenarios Incorporating comprehensive maps a handy technical synopsis and a summary for policy makers this landmark volume is an essential reference for academic researchers across a wide range of disciplines as well as stakeholders and policy makers It is also a valuable tool in communicating the key environmental issues and future challenges to the wider public
