Red Hat Certified Engineer (RHCE) Study Guide Andrew Mallett, 2021 Study the material in this book to prepare for the RHCE exam EX294 and to learn how using Ansible within your own environment improves system administration productivity This book covers all of the objectives of the exam and extends further ensuring that you know how to use Ansible to manage Linux The book uses CentOS a Red Hat based distribution and Ubuntu instead of using a single Red Hat distribution By using the two distributions you will understand the power of Ansible and how easily you can deal with multiple platforms which is crucial for your understanding of Ansible in the real world The book assumes no previous knowledge of Ansible but some knowledge of Linux system administration from the command line You will learn how to

manage Linux systems that are installed with different distributions including CentOS Enterprise Linux 8 and Ubuntu 18.04. You will be able to manage these systems using ad hoc commands from the command line as well as creating Ansible playbooks that can be replayed reliably many times. To save on the code that you have to create you will learn how to use Ansible Galaxy to search for and download roles and collections that are pre-written to manage elements of your Linux installations. By the end of this book you will be able to write efficient and effective YAML playbooks to manage your entire estate. You will prepare systems so that passwordless access can be used with Ansible remotely. Use ad hoc commands to quickly configure systems. Use and format YAML files correctly. Create playbooks that grow in their complexity as your experience develops. Ensure that services are restarted on configuration changes.

Ansible Certification Sander van Vugt, 2019. More than 9 Hours of Video Instruction. More than 9 hours of video instruction to first get you started using Ansible and then help you use Ansible to automate the configuration of systems and applications. Overview. This title includes two courses. Ansible Fundamentals LiveLessons provides a quick introduction to Ansible for administrators and developers who want to get started in a fast and easy way without spending too much time on details. Automating with Ansible LiveLessons then builds on those basics to show you how to automate the configuration of systems and applications. Since it was first released, Ansible has become one of the most used systems for configuration management. You will start with an introduction to working with Ansible including essential configuration to get you started as quickly as possible. You then learn about Ansible architecture and essential Ansible components including playbooks, variables, task control, flow control, conditionals, and Jinja2 templates. Every lesson ends with a lab and lab solution so you can see firsthand how to use Ansible in your own work. You will then move on to using DevOps. Learn how Vagrant can be used to set up an environment with virtual machines and how to set up an IT infrastructure with Ansible that you can follow along through the instructor demonstrations. Van Vugt also discusses how to manage Windows network equipment as well as cloud infrastructure with Ansible. Next, the more advanced Ansible features are demonstrated such as working with roles, task control, and using Ansible Vault followed by walk-through examples of Ansible optimization and troubleshooting. In the last lesson, learn how to work with Ansible Tower which helps to efficiently use Ansible in a datacenter environment. This course can also be used as a secondary resource to get you started studying for the Red Hat Certificate of Expertise in Ansible Automation exam 407.

About the Instructor: Sander van Vugt has been teaching Linux classes since 1995 and has written more than 60 books about different Linux-related topics. Sander is a Red Hat Certified Instructor and has deep knowledge and understanding of Red Hat Enterprise Linux, including the upcoming Red Hat Enterprise Linux 7.
