Dunkle Materie Physik:

Die Fakultät für Physik/The Faculty of Physics Gerald Badurek, 2015-10-02 The hallmark of Technical Physics at the Faculty of Physics is the close connection between research and teaching Despite the high level of specialisation required for remaining internationally competitive in cutting edge research physics at TU Vienna nevertheless covers a remarkably broad range of topics that can be roughly divided into three core areas the physics of matter physical technology and fundamental interactions This volume is intended to give the non specialised reader an impression of the outstanding research and teaching done at the Faculty of Physics

Dark Matter in Astro- and Particle Physics Hans-Volker Klapdor-Kleingrothaus, Richard Arnowitt, 2006-02-23 The Fifth HEIDELBERG International Conference on Dark Matter in Ast and Particle Physics DARK 2004 took place at Texas A M University College Station Texas USA October 3-9 2004 It was after Cape Town 2002 the second conference of this series held outside Germany The earlier meetings starting in 1996 were held in Heidelberg Dark Matter is still one of the most exciting and central fields of ast physics particle physics and cosmology The conference covered as usual for this series a large range of topics theoretical and experimental Theoretical talks covered SUSY SUGRA phenomenology which provides at present a preferred theoretical framework for the existence of cold dark matter Also included were other possible explanations of dark matter such as SUSY Q balls exciting New Symmetries etc The most important experiments in the underground search for cold and hot dark matter were presented Talks describing the current experimental dark matter bounds what might be obtained in the near future and the reach of future large i e one ton detectors were given The potential of future colliders to correlate accelerator physics with dark matter searches was also outlined Thus the reader will be able to see the present status and future prospects in the search for dark matter The exciting astronomical evidence for dark matter and corresponding observations concerning the Milky Way's black hole high redshift clusters wakes in dark matter halos were other important topics at the conference

Sixty Years Of Double Beta Decay: From Nuclear Physics To Beyond Standard Model Hans Volker Klapdor-Kleingrothaus, 2001-04-30 Nuclear double beta decay is one of the most promising tools

for probing beyond the standard model physics on beyond accelerator energy scales It is already now probing the TeV scale on which new physics should manifest itself according to theoretical expectations Only in the early 1980s was it known that double beta decay yields information on the Majorana mass of the exchanged neutrino At present the sharpest bound for the electron neutrino mass arises from this process It is only in the last 10 years that the much more far reaching potential of double beta decay has been discovered Today the potential of double beta decay includes a broad range of topics that are equally relevant to particle physics and astrophysics such as masses of heavy neutrinos of sneutrinos as SUSY models compositeness leptoquarks left right symmetric models and tests of Lorentz symmetry and equivalence principle in the neutrino sector Double beta decay has become indispensable nowadays for solving the problem of the neutrino mass spectrum and the structure of the neutrino mass matrix together with present and future solar and atmospheric neutrino oscillation experiments Some future double beta experiments like GENIUS will be capable to be simultaneously neutrino observatories for double beta decay and low energy solar neutrinos and observatories for cold dark matter of ultimate sensitivity This invaluable book outlines the development of double beta research from its beginnings until its most recent achievements and also presents the outlook for its highly exciting future

Moschella,2011-02-10 This book brings together reviews from leading international authorities on the developments in the study of dark matter and dark energy as seen from both their cosmological and particle physics side Studying the physical and astrophysical properties of the dark components of our Universe is a crucial step towards the ultimate goal of unveiling their nature The work developed from a doctoral school sponsored by the Italian Society of General Relativity and Gravitation The book starts with a concise introduction to the standard cosmological model as well as with a presentation of the theory of linear perturbations around a homogeneous and isotropic background It covers the particle physics and cosmological aspects of dark matter and dynamical dark energy including a discussion of how modified theories of gravity could provide a possible candidate for dark energy A detailed presentation is also given of the possible ways of testing the theory in terms of cosmic microwave background galaxy redshift surveys and weak gravitational lensing observations Included is a chapter reviewing extensively the direct and indirect methods of detection of the hypothetical dark matter particles Also included is a self contained introduction to the techniques and most important results of numerical e g N body simulations in cosmology This volume will be useful to researchers PhD and graduate students in Astrophysics Cosmology Physics and Mathematics who are interested in cosmology dark matter and dark energy

Particle Physics Hans Volker Klapdor-Kleingrothaus, 2001 Dark matter has become one of the most exciting and central fields of astrophysics particle physics and cosmology The lectures and talks in these proceedings emphasize equally the experimental and theoretical perspectives of the ongoing search for dark matter in the universe stressing in particular the interplay between astro and particle physics *Dark Matter in Astro- and Particle Physics* Hans-Volker Klapdor-Kleingrothaus, Raoul D. Viollier, 2012-11-09 The Fourth HEIDELBERG International Conference on Dark Matter in Astro and Particle Physics DARK2002 was held in Cape Town South Africa in the period 4-9 February 2002 This majestic natural area was the site of the first conference of this series hosted since 1996 in Heidelberg to be held outside of Germany Dark Matter has become one of the most exciting and central fields of astrophysics particle physics and cosmology The conference covered as usual for this series a large range of topics theoretical and experimental Topics included Astronomical Evidence for Dark Matter the Cosmic Microwave Background Supersymmetry Inflation and Dark Energy Structure Formation Hot and Cold Dark Matter and Ultrahigh Energy Cosmic Rays all of which were represented by experts in the field It was very nice to see again many of our old friends in Dark Matter here in South Africa The organizers were very glad to see in addition to world experts the new generation here Many young participants gave very nice professional talks during the conference We are grateful to John Ellis for doing an incredible job preparing his excellent summary talk during the sessions Some special interest and intensive discussions were naturally raised by the first announcement of terrestrial evidence for hot dark matter obtained from neutrino less double beta decay This now adds to the evidence for cold dark matter which we have from DAM A for several years already and which remained unchallenged up to now by other experiments **Particle Physics and Cosmology: Dark Matter** M. Srednicki, 2012-12-02 At least eighty percent of the mass of the universe consists of some material which unlike ordinary matter neither emits nor absorbs light This book collects key papers related to the discovery of this astonishing fact and its profound implications for astrophysics cosmology and the physics of elementary particles The book focuses on the likely possibility that the dark matter is composed of an as yet undiscovered elementary particle and examines the boundaries of our present knowledge of the properties such a particle must possess
