TEACHING STRUCTURAL ANALYSIS

SUMMARY

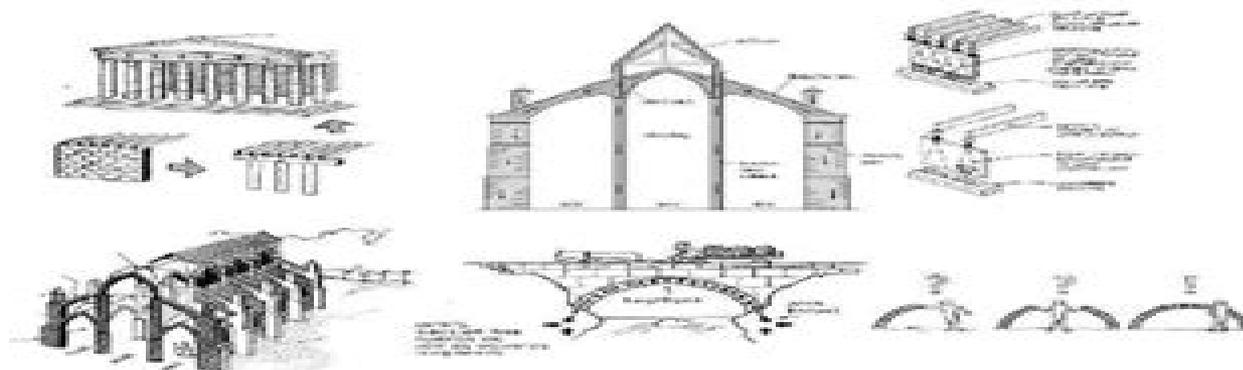

The paper presents a significance of the Department of Structural Analysis and Design education process for the students of architecture.

WHAT AND WHY WE TEACH - Description of the course

The essence of structural design is to shape each structure to respond effectively to the forces that it is exposed to. Buildings, like any other physical entity, require structural frameworks to maintain their existence in a recognizable physical form.

Thus, students of architecture should be involved in the process of creating suitable structural form throughout education, from their first fundamental lessons to the extended designs of their advanced courses. Knowledge of statics, which is the science of the effects and distribution of forces on bodies that remain in equilibrium, is a sufficient basis for the identification of ideal forms.

Knowledge of statics and an art of shaping structures are natural companions. All structural wisdom grows from understanding of these elements of statics. Students that emerge from a course in statics with a confident command of them are well prepared to undertake the study of the internal flows of forces.
