Optimization and Industry: New Frontiers Panos M. Pardalos, Victor Korotkikh, 2013-12-01 Optimization from Human Genes to Cutting Edge Technologies The challenges faced by industry today are so complex that they can only be solved through the help and participation of optimization experts For example many industries in e commerce finance medicine and engineering face several computational challenges due to the massive data sets that arise in their applications Some of the challenges include extended memory algorithms and data structures new programming environments software systems cryptographic protocols storage devices data compression mathematical and statistical methods for knowledge mining and information visualization With advances in computer and information systems technologies and many interdisciplinary efforts many of the data avalanche challenges are beginning to be addressed Optimization is the most crucial component in these efforts Nowadays the main task of optimization is to investigate the cutting edge frontiers of these technologies and systems and find the best solutions for their realization Optimization principles are evident in nature the perfect optimizer appeared early in human history Did you ever watch how a spider catches a fly or a mosquito Usually a spider hides at the edge of its net When a fly or a mosquito hits the net the spider will pick up each line in the net to choose the tense line Some biologists explain that the line gives the shortest path from the spider to its prey Asian Oil & Gas, 1994 The Race for Space, 1999 *LPG Equipment and Accessories.
