Somani, Radha Poovendran, 2018 Cyber security research is one of the important areas in the computer science domain which  
also plays a major role in the life of almost every individual enterprise society and country which this book illustrates A large  
number of advanced security books focus on either cryptography or system security which covers both information and  
network security However there is hardly any books available for advanced level students and research scholars in security  
research to systematically study how the major attacks are studied modeled planned and combated by the community This  
book aims to fill this gap This book provides focused content related to specific attacks or attack families These dedicated  
discussions in the form of individual chapters covers the application or area specific aspects while discussing the placement  
of defense solutions to combat the attacks It includes eight high quality chapters from established security research groups  
worldwide which address important attacks from theoretical modeling as well as practical aspects Each chapter brings  
together comprehensive and structured information on an attack or an attack family The authors present crisp detailing on  
the state of the art with quality illustration of defense mechanisms and open research problems This book also covers various

have not been given much consideration The book DDoS Attacks Classification Attacks Challenges and Countermeasures  
provides an overview of both types of defensive solutions proposed so far exploring different dimensions that would mitigate  
the DDoS effectively and show the implications associated with them Features Covers topics that describe taxonomies of the  
DDoS attacks in detail recent trends and classification of defensive mechanisms on the basis of deployment location the types  
of defensive action and the solutions offering economic incentives Introduces chapters discussing the various types of DDoS
