About PLCs

PLCs were developed to provide a means of controlling manufacturing processes through relays. For more information, see www.rockwellautomation.com.

A PLC is a computerized device that can be programmed to perform a variety of tasks. It is designed to be used in harsh environments, including dust, vibration, and temperature extremes. They accept a flow of data in the form of digital signals, store the data, and execute the program. They are designed to be used in a variety of applications, including manufacturing, material handling, and process control.

Modern PLCs are often used in a variety of applications. They can be used for simple and intermediate control tasks, as well as for complex applications that require high-speed processing.

The range of PLCs available is very large. However, the most common PLCs are the Allen-Bradley 1756 series PLCs. These PLCs are designed to be used in a variety of applications, including manufacturing, material handling, and process control.

One of the most popular PLCs is the Allen-Bradley 1756 series PLC. This PLC is designed to be used in a variety of applications, including manufacturing, material handling, and process control. It is a modular PLC, which means that it can be configured to meet the needs of a specific application.
