Exam 98-381: Introduction to Programming Using Python — Skills Measured

Audience Profile

Candidates for this exam should be able to recognize and write syntactically correct Python code, recognize data types supported by Python, and be able to recognize and write Python code that will logically solve a given problem.

Candidates are expected to have had, at a minimum, instruction and/or hands-on experience of approximately 100 hours with the Python programming language, be familiar with its features and capabilities, and understand how to write, debug, and maintain well-formed, well documented Python code.

Skills Measured

NOTE: The bullets that appear below each of the skills measured are intended to illustrate how we are assessing that skill. This list is not definitive or exhaustive.

NOTE: In most cases, exams do NOT cover preview features, and some features will only be added to an exam when they are GA (General Availability).

Perform Operations using Data Types and Operators (20–25%)

Evaluate an expression to identify the data type Python will assign to each variable

- identify str, int, float, and bool data types

Perform data and data type operations

- convert from one data type to another type; construct data structures; perform indexing and slicing operations

Determine the sequence of execution based on operator precedence

- assignment; comparison; logical; arithmetic; identity (is); containment (in)

Select the appropriate operator to achieve the intended result

- assignment; comparison; logical; arithmetic; identity (is); containment (in)
