

The background features a vibrant, futuristic cityscape with tall buildings in shades of red, orange, and purple. A white silhouette of a person's head in profile is positioned on the left side, facing right. Overlaid on the scene are various digital elements: a grid of small black dots, binary code (0s and 1s), and a glowing globe with green and blue patterns. The overall aesthetic is high-tech and forward-looking.

**Resilience in Ecology and Urban Design** S.T.A. Pickett, M.L. Cadenasso, Brian McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience *Urbanization and Development*, 2016 The analysis of urban development of the past twenty years presented in this maiden edition of the World Cities Report shows with compelling evidence that there are new forms of collaboration and cooperation planning governance finance and learning that can sustain positive change The Report unequivocally demonstrates that the current urbanization model is unsustainable in many respects It conveys a clear message that the pattern of urbanization needs to change in order to better respond to the challenges of our time to address issues such as inequality climate change informality insecurity and the unsustainable forms of urban expansion *Inclusive Cities* Florian Steinberg, Michael Lindfield, 2011 Publication stock no BKK113645 T p verso *Sustainable Development in the European Union*, 2016 This Eurostat publication entitled Sustainable development in the European Union A statistical glance from the viewpoint of the UN Sustainable Development Goals provides an overview of the current situation of the EU and its Member States on sustainable development in relation to the Sustainable Development Goals SDGs This publication follows a strictly descriptive approach presenting a purely statistical picture based on facts and figures It provides rather a snapshot of the starting position of the EU and its Member States and is not intended as a regular SDG monitoring exercise at EU level The analysis in this publication is based on a limited number of indicators which are relevant to the EU perspective and capture the broader objective and ambition of each SDG Each goal is analysed through two to four indicators In total 51 indicators are presented in the report mainly

obtained from the European Statistical System and disseminated by Eurostat The analysis of Member States performance and international comparisons focus on the most recent year for each indicator EU 28 trends over time are also presented covering the period from 2000 or 2002 up to the most recent year for which data are available 2014 or 2015 Back cover
