2.5 The Demographic Transition Model

Demographic Transition Model
 The Demographic Transition Model (DTM) is a model that describes the changes in population growth over time. It is divided into five stages: Stage 1 (High birth and death rates), Stage 2 (Declining death rates), Stage 3 (Declining birth rates), Stage 4 (Low birth and death rates), and Stage 5 (Very low birth and death rates).

Stage 1
 Stage 1 is characterized by high birth rates and high death rates. Because of this, the natural increase rate is close to zero. Population growth is slow because the death rate is high and the birth rate is not high enough to offset the population losses. The birth rate and the death rate are both high because of high infant mortality.
