## Summary:

Cellular transcription is the process by which genetic information from DNA is transcribed or copied into RNA. RNA is a single-stranded molecule that is chemically similar to DNA, but it is shorter and plays a variety of important roles in the cell, such as carrying genetic information from DNA to the ribosomes for protein synthesis and regulating gene expression. Transcription occurs in the nucleus of eukaryotic cells and in the cytoplasm of prokaryotic cells. It is carried out by an enzyme called RNA polymerase, which reads the DNA template and synthesizes a complementary RNA molecule.
