sun is not constant at all time it is necessary to predict the pump s performance To do so mathematical modeling and simulation of the electric submersible pump is proposed here The dynamic model of the induction motor consists of an electrical Sub model to implement the three phase to two axis 3 2 d q transformation of stator voltage and current calculation a torque sub model to calculate the developed electromagnetic torque and a mechanical sub model to yield the rotor speed The submersible pump is modeled with the inputs as shaft speed torque and head The output variable is chosen to be discharge With these system modules the electrical and mechanical condition of the pump under different insolation is simulated with Matlab Simulink model
