**LEDA** Kurt Mehlhorn, Stefan Näher, 1999-11-11 LEDA is a library of efficient data types and algorithms and a platform for combinatorial and geometric computing on which application programs can be built. In each of the core computer science areas of data structures graph and network algorithms and computational geometry LEDA covers all and more that is found in the standard textbooks. LEDA is the first such library; it is written in C and is available on many types of machines. Whilst the software is freely available worldwide and is installed at hundreds of sites, this is the first book devoted to the library. Written by the main authors of LEDA, it is the definitive account describing how the system is constructed and operates and how it can be used. The authors supply ample examples from a range of areas to show how the library can be used in practice, making the book essential for all workers in algorithms data structures and computational geometry.

*Computer Science & Perl Programming* Jon Orwant, 2002-11-04 In its first five years of existence The Perl Journal ran 247 articles by over 120 authors. Every serious Perl programmer subscribed to it and every notable Perl guru jumped at the opportunity to write for it. TPJ explained critical topics such as regular expressions databases and object oriented programming and demonstrated Perl's utility for fields as diverse as astronomy biology economics AI and games. The magazine gave birth to both the Obfuscated Perl Contest and the Perl Poetry contest and remains a proud and timeless achievement of Perl during one of its most exciting periods of development.

*Computer Science and Perl Programming* is the first volume of The Best of the Perl Journal compiled and re-edited by the original editor and publisher of The Perl Journal, Jon Orwant. In this series we've taken the very best and still relevant articles published in TPJ over its 5 years of publication and immortalized them into three volumes. This volume has 70 articles devoted to hard core computer science advanced programming techniques and the underlying mechanics of Perl. Here's a sample of what you'll find inside: Jeffrey Friedl on Understanding Regexp; Mark Jason Dominus on optimizing your Perl programs with Memoization; Damian Conway on Parsing; Tim Meadowcroft on integrating Perl with Microsoft Office; Larry Wall on the culture of Perl. Written by 41 of the most prominent and prolific members of the closely knit Perl community, this anthology does what no other book can: giving unique insight into the real life applications and powerful techniques made possible by Perl. Other books tell you how to use Perl, but this book goes far beyond that: it shows you not only how to use Perl, but what you could use Perl for. This is more than just The Best of the Perl Journal; in many ways, this is the best of Perl.
